WILEY

# We've advanced our imaging technology, with your research in mind

## **NEW** ORCA-Flash4.0 V3 sCMOS Camera

Expertly handles applications ranging from the acquisition of accurate scientific images to experiments that demand sensitivity, quantification and speed.

- Intelligent data reduction
- Highly refined in-camera pixel-level calibrations
- Individual camera noise characterisation
- Increased USB3.0 frame rates
- Extensive triggering capabilities
- Patented lightsheet readout modes

## **NEW** ORCA-Flash4.0 LT+ sCMOS Camera

Designed to be the new workhorse digital camera to bring high end performance to every imaging project.

- 82 % Quantum Efficiency at 600 nm
- 30 frames/second at 4.2 megapixel resolution
- W-VIEW Mode – independent exposure of each half of the sensor for simultaneous two-colour imaging

## **NEW** W-VIEW GEMINI-2C Image Splitting Optics

The first dual camera, dual channel system engineered with super resolution quality; simultaneously offering versatility, expandability and ease of use.

- Wide field of view (20 mm for standard imaging, 12 mm for diffraction-limited imaging)
- Ultra-low distortion (0.05 %)
- High spatial uniformity (98 %)
- High transmission (98 % @ 450-800 nm)
- Robust opto-mechanical design for ease of alignment and versatility

# Europe Second?

The year 2017 began with an ideal event for late-night talkers and comedians. US President Donald Trump, who was inaugurated on January 20, 2017, triggered a wave of not-so-serious videos, originating in the Netherlands, for second place in the world. We all laughed a lot.

Meanwhile, even those who are able to keep world events at a distance have lost the ability to laugh it all off.

„America first!“ has quickly become a disturbing indication for the growth of nationalism and protectionism worldwide. European states, too, are „doing their thing“ as if there were no common European idea of peace, freedom and prosperity, no idea of a democracy based European Community and no common currency. They are acting as if there is no tomorrow, either that the European Union belongs to them or that it is already dead.

A sceptical observer might think that Europe is not even bidding for second place but for any place at all, somewhere near the back. And some, who are doing „their own thing“, are clearly speculating on a place far ahead in the competition of economies, although it is unclear whether these expectations are based on facts or rather on elevated testosterone levels of some state leaders.

All that being said, unquestionable facts prove that the Machine Vision Industry, especially in Europe, seems unaffected and is recording success on success. Figures are robust, trends are pointing upwards and forecasts are optimistic. The future being predicted is also based on conditions that should not significantly deteriorate.

At the moment, interested players may find the playing field a bit puzzling, the strategies of the teams confusing and the course of the game unpredictable. It is exactly at this point where we position ourselves with inspect. We certainly cannot interpret world events conclusively, but we can gather, process and present facts that give you, dear readers, something to help you better interpret the current situation and further development, at least for your industry.

This is what we are doing with this issue of the inspect Buyers Guide, providing you with an overview of the players on the field and tips on their performance. In addition, with nine issues of our inspect over the course of 2018, we will not only present facts and developments for the German-speaking market, but our three international editions will also take the international market into consideration in greater detail.

Use this 10<sup>th</sup> edition of the inspect Buyers Guide to find the right supplier or partner for your specific project. Be it a company from your country, from Europe or from another part of the world.

GO your own way...

When you need low cost, high performance and ultra-reliability in a machine vision system, there's a JAI Go Series camera to help you reach your destination. Choose the perfect combination of imager, resolution, pixel size and interface to fit your exact requirements. From our most affordable 2.35 megapixel GO-2401-PGE, to our newest 5.1-megapixel GO-5100-USB model, these cameras combine small size, light weight (only 46 grams), and MTBF ratings equal to more than 20 years of continuous 24 x 7 operation. Ready to make your system Go? Find your best route at [www.jai.com/go](http://www.jai.com/go)

## The GO Series...

*Small and affordable industrial cameras*

- ✓ Latest CMOS sensors
- ✓ Small size (29 x 29 x 52 mm)
- ✓ MTBF > 200,000 hours
- ✓ Camera Link, GigE Vision, or USB3 Vision

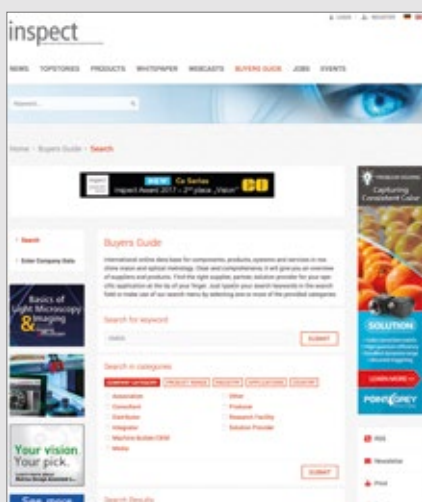

*See the possibilities*

# Machine Vision and Optical Metrology in Europe

## The inspect Buyers Guide 2018

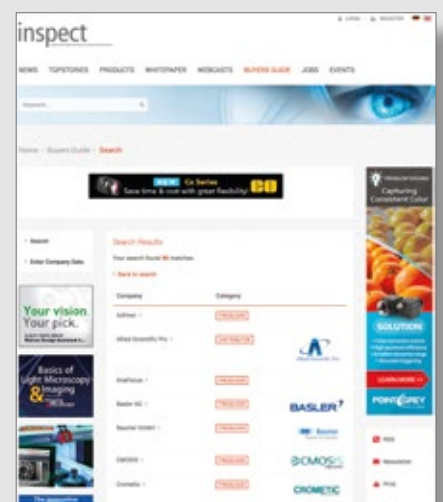

Throughout the year, we aim to provide you with information about new developments, technological trends, groundbreaking applications, new products and leading companies. Throughout the year, we are faced with the recurring challenge: What to select, what to highlight, what to point out. There is never enough room to cover it all. So once a year we seize the opportunity to present to you a comprehensive overview of the machine vision and optical metrology industries.

The Online Buyers Guide provides sophisticated search functions for all listed companies.

Companies providing a full-fledged company profile will be additionally found in multiple categories with the keyword search.

The full text search for "CMOS" yields 40 results: every company having used the word "CMOS" in their description is listed.

The inspect Buyers Guide is published in its ninth year now, for the 10th time it also serves as the official Buyers Guide of the EMVA, the European Machine Vision Association. The guide contains information about more than 500 companies from over 30 countries. The inspect Buyers Guide has a clear focus on companies doing business in Europe or exporting their goods to Europe. Naturally this comprehends companies and organizations from all over the world.

**Online ...**

The inspect Buyers Guide is a true cross-media product. At [www.inspect-online.com/buyers-guide](http://www.inspect-online.com/buyers-guide) the online database provides sophisticated search functions for all listed companies. Every entry can be searched for with full-text search, and every listed company will be found here based on the individual company description. Additionally, every listed company will be found by name, company category (e.g. producer, integrator, research facility, association, etc.) and country of headquarters.

Companies wanting to provide more information and aiming at even better search results are listed with a company profile, including detailed company data and a listing of products offered, industries served and applications catered to. These, and only these, companies will be found in the respective search categories.

The online Buyers Guide is open for companies within the scope of the inspect all year round. In this way it is always up-to-date.

**... and Print**

The availability of data online is a clear benefit when presented with clever search functions. However, sometimes you do not want to bother going online, or you don't want to search specifically but rather obtain a quick overview. In these instances a printed version has its unchallenged advantages.

Not to mention the ease-of-use when taking notes right next to the provided data. Thus, once a year the inspect Buyers Guide printed edition is provided to you. With this guide we aim to give you a full overview that is still easy-to-use, a complete set of information that is still not too sub-divided into too many categories.

The inspect Buyers Guide 2018 is divided into three main chapters: Topics, company profiles for the main global regions, and company listings for the main product categories. In an

industry as innovative and dynamic as ours it will most likely never be possible to provide an overview that is final and complete, but we do our best to come as close as possible.

# News EMVA 2017/2018

Conference Room of first Embedded Vision Europe conference

©EMVA

## Premiere Event of Embedded Vision Europe at ICS Stuttgart Was Great Success

The first Embedded Vision Europe conference (EVE) which took place on 12 and 13 October 2017 at the ICS Stuttgart closed with a fully booked attendance of about 200 participants. The event has brought top-notch speakers from companies like Intel, AMD, Qualcomm, The Math Works, Xilinx, and others to Stuttgart. They have shared with the audience their insights about latest developments in vision processing, image acquisition and deep learning. "Machine Vision is a €10+ billion industry with annual growth rates north of 10%. Embedded Vision provides the hardware and software tools to boost this growth far beyond traditional growth rates and traditional expectations. This is happening right here and right now. Europe's rich ecosystem of vision manufacturers, vision machine builders and vision solution providers and the new hardware and software platforms from the embedded world will be a perfect match. This is what we wanted to support with our conference by connecting people to people and people to knowledge. We are very happy to see that our idea has caught on with our target audience," says Gabriele Jansen, Member of the Board of the EMVA which organized the conference. Florian Niethammer, Team Leader Vision at Landesmesse Stuttgart which hosted the first EVE added: „With around 200 attendees the debut of the

Embedded Vision Europe was a full success. In this high-profile technical conference the latest developments in embedded vision were shown. We are especially proud that together with our partner EMVA we managed to provide this trend topic in imaging with the platform it deserves and to organize the first event of this kind on a European level here in Stuttgart." Participants, speakers and exhibitors at the accompanying table-top exhibition were fully convinced about the new conference: „Computer vision will soon give the power of sight to all our electronic devices. This conference brought together key engineers and executives that are pushing the boundaries of this technology, making it a great place to understand important trends and how vision will be embedded into powerful new products," said Marco Jacobs, VP Marketing at Videantis and one of the top-notch speakers. "This event has been an excellent initiative by the EMVA to provide a focus to discuss the advancement of embedded System-on-Chip technologies and how they may impact but also give opportunities in the machine vision industry. The speakers have been of a suitable high-caliber as I have come to expect from EMVA events and the topics presented have provided thought provoking material for networking discussions," says Colin Pearce, Managing Director Active Silicon.

Paul Maria Zalewski, Product Line Manager at Allied Vision Technologies confirmed the overall impression pointing out the necessity of addressing embedded vision in such a conference format: "The change to Embedded Vision already started a couple of years ago and will speed up further every year. Overall, I believe that in the classic machine vision applications within factory automation, the process of shifting to embedded systems will take longer than in applications and markets which demand embedded systems from the very start because they are restricted in terms of price and size. On the other hand, if smart factory approaches will be further pushed by the industry, it can make PC-based systems less attractive faster than expected. Embedded Vision has the potential to divide our machine vision industry. Not all players might be able to adapt quickly enough and may find themselves back in niche markets, where PC-based systems will be still the dominate system in the future."

With respect to the speed of development in the embedded vision market and the importance this topic gained in the machine vision sector plans are under way to establish the conference in the coming years.

# EMVA Events 2018

Peering into 2018 the EMVA once again proposes a series of key events that have been established in the European and even more international machine vision community either as standalone conferences or alongside important trade shows. Starting point in spring is the forum 'Control Vision Talks' during the first three trade show days at the 32. Control trade fair in Stuttgart. From 24 to 26 April this series of application oriented presentations brings hands-on implementation examples and new machine vision technology to the visitors of this leading international trade fair for quality assurance. In the following month, the 'Parma Vision Night' again takes place on the evening prior to the opening of the SPS IPC Drives fair in Parma/Italy, offering a specific networking opportunity to the stakeholders of machine vision technology in Italy. This is followed by the highlight event in the first half year, the EMVA Business Conference which takes place in Dubrovnik/Croatia. Participants can already register under the attractive Early Bird conditions.

After the summer break, from 5 September on the third European Machine Vision Forum for three days brings together research and industry players in Bologna. The last quarter 2018 will clearly be dominated by Vision 2018 taking place from 6 to 8 November at Messe Stuttgart. Here, the EMVA again will act as leading organizer of the International Machine Vision Standards Booth jointly with its partner associations around the world. On the evening prior to the trade fair opening it has become tradition that the EMVA hosts the EMVA International Vision Night, a get-together event in the forefront of the busy trade show days.

In addition to this already rich event calendar some other formats are currently under discussion, amongst them is the repetition of the highly successful Embedded Vision Europe conference which took place for the first time in October 2017. Details will be announced soon.

**Calendar:**

**24 - 26 April 2018, Stuttgart, Germany**

# VDMA Machine Vision

News, Activities and Upcoming Events 2018

(Foto: © fotogestoeber - Fotolia.com)

Following a successful year 2017, an intense and busy year 2018 lies ahead of the VDMA Machine Vision group. The list of planned activities and events proves that VDMA Machine Vision will keep its finger on the pulse of market and of technology development.

Fig. 1: VDMA panel discussion at the Embedded World 2017

©VDMA Robotics + Automation

## Machine Vision Industry in Germany: New Forecast of 18% Growth in 2017

End of September, VDMA raised its 2017 growth forecast for the German robotics and automation industry from 7 to 11 % (fig. 2). “Both incoming orders and turnover development for the current year have greatly exceeded our expectations,” said Dr. Norbert Stein, Chair of the Board of VDMA Robotics + Automation and Managing Director of Vitronic. “For the first time, we will hit the mark of € 14 billion in sector turnover.” All three segments of German robotics and automation are on a strong growth trajectory for 2017 and the machine vision again beats them all (fig. 3). According to the new forecast, machine vision will achieve an 18 % increase in turnover instead of the initially expected 10 %. This corresponds to an industry turnover of € 2.6 billion. For 2018, VDMA forecasts a turnover growth of 13 % for the German machine vision industry, and + 10 % for the robotics + automation sector. For Europe, the prospects are good, but not quite as bright as for the German machine vision industry, as the development of the

monthly European machine vision index figures indicate.

**VDMA Machine Vision Activities in 2018**

**Vision**

The Vision/VDMA CEO roundtable on 6 February will discuss new developments, trends and future visions of the machine vision industry – official starting signal of the Vision year. The world’s leading trade show for machine vision will take place nine months afterwards. Again, the Vision show is expected to be a “record” show regarding the number of exhibitors and visitors, as well as innovativeness. VDMA MV as conceptual sponsor will again promote and support the show. As in previous years, VDMA will organize the Industrial Vision days, the world’s biggest and leading presentation forum for machine vision technology and will be involved in various other activities (VDMA Technology Days, panel discussion, International Vision Standards booth etc.)

**Embedded World 2018 – Boost for Embedded Vision in Europe**

From 27 February to 1 March 2018, the European embedded systems community will meet in Nuremberg at the Embedded World exhibition & conference – 2018 in its 16<sup>th</sup> year with about 1,700 participants in the conference and over 30,000 visitors of the show. In 2018, the embedded vision track of the conference will cover 1.5 days. As in 2017, VDMA and the Embedded World will organize a panel discussion at the trade show. Its topic will be Migration – from PC to Embedded and from Embedded to Vision. VDMA MV’s motivation for connecting with the embedded systems community is quite obvious: embedded vision is one of the „hot topics“, not only for machine vision, but also for the embedded systems community. The Embedded World is a well-established platform and market place for embedded technologies in Europe, targeting at developers, project and product managers that are looking for new trends and technologies – persons you need to

connect with when approaching the topic in Europe.

**International Vision Standards Meeting (IVSM)**

The international vision standardisation community will meet from 14 to 18 May 2018 at the VDMA premises in Frankfurt to work on running G3 standards and standardization projects, such as GenICam, GigE Vision, CoaXPress, CameraLink HS, USB3 Vision, OPC Vision, and to discuss new projects (e.g. mipi CSI-2) during the Future Standards Forum. Host of the IVSM in spring 2018 is Silicon Software. Preparations are well under way.

**Automatica 2018**

Machine Vision will again play an important role at Automatica, the leading European innovation platform for the automation of production (19 to 22 June 2018 in Munich, Germany), sponsored by VDMA Robotics + Automation. A machine vision pavilion will offer a hassle-free and cost-effective possibility to exhibit. Of course, machine vision will play an important role in the VDMA R + A Industry 4.0-Demonstrator, as well as in the presentation forums and panel discussion.

**VDMA Robotics + Automation Members Assembly in September**

The 280 VDMA R + A members will meet in a two-day event at end of September 2018 to discuss future trends for the robotics and automation industry. There, the new VDMA Machine Vision Board for 2019 to 2021 will be elected. Without any doubt, many of the running projects will go on, also in the next period. The signals are set for further growth and expansion of the industry.

**VDMA MV Standardization Activities – OPC Vision and VDI/VDE/VDMA 2632 Series**

In 2014, VDMA Machine Vision joined G3, a cooperative initiative to coordinate the development of globally adopted vision standards, with the goal to bring in expertise of system integrators. Ever since, VDMA Machine

**WebAccess/EzBuilder**

- No need to program
- Quickly deployed in diverse environments

[www.advantech.eu](http://www.advantech.eu)

“A major and important project is the OPC Vision initiative.”

Vision has built up activities and capacities. In autumn 2016 Dr. Reinhard Heister joined the VDMA Machine Vision team to coordinate and drive standardisation development.

The VDMA Machine Vision group is currently actively driving two standardisation projects toward: The VDI/VDE/VDE 2632 series of standards – guidelines to structure and facilitate the communication between system integrators and end-users. In autumn 2017, part 3 (Machine vision/industrial image processing – Acceptance test of classifying machine vision systems) was published.

A major and important project is the OPC Vision initiative. Goal is to develop an OPC UA companion specification for machine vision aiming at a straightforward integration of machine vision systems into production control and IT systems. The scope is not only to complement or substitute existing interfaces between a machine vision system and its process environment by OPC UA, but also to create non-existent horizontal and vertical integration capabilities to communicate relevant data to other authorized process participants, e.g. right up to the IT enterprise level. Therefore, the OPC UA Vision interface exchanges information between a machine vision system and another machine vision system, a machine PLC, a line PLC, or any software system at the control device level accessing the machine vision system.

**About VDMA Machine Vision**

The VDMA represents over 3,200 mainly small and medium size member companies in the engineering industry, making it one of the largest and most important industrial associations in Europe. As a part of the VDMA Robotics + Automation Association, VDMA Machine Vision unites more than 115 members: companies offering machine vision systems and components. The objective of this industry-driven platform is to support the machine vision sector through a wide spectrum of activities and services. Current activities include statistics and the annual VDMA Machine Vision Market Survey, standardisation, marketing services, public relations, trade fair policy, future radar, networking events and conferences.

[www.vdma.com/vision](http://www.vdma.com/vision)

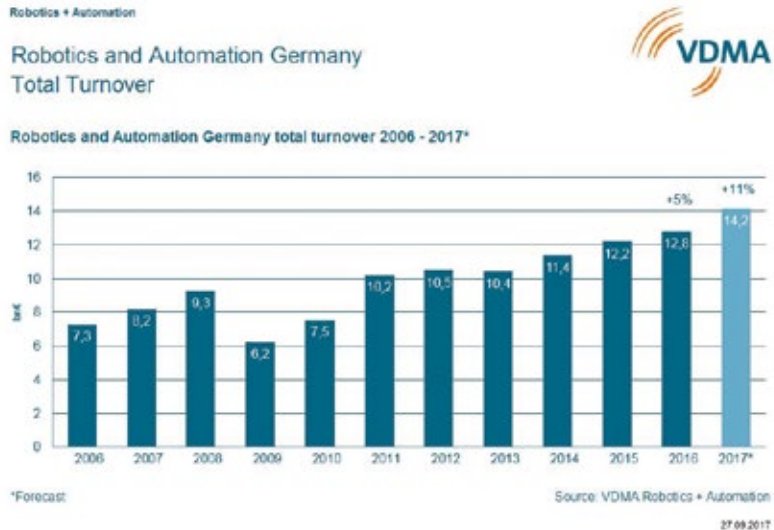

Fig. 2: Robotics and Automation Germany total turnover

©VDMA Robotics + Automation

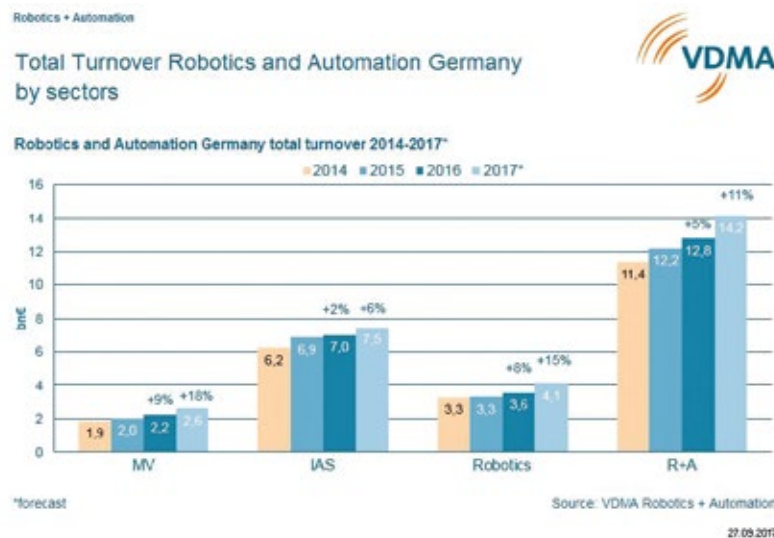

Fig. 3: Robotics and Automation Germany total turnover by sectors

©VDMA

At Automatica in June 2018, a release candidate of the first part of the OPC UA companion specification for machine vision will be published. Part 1 covers the smallest common denominator of information and functions, which every type of machine vision system needs for the integration into the production environment. For example, functions for triggering or managing recipes are included. Subsequent parts will extend the basic machine vision description and cover the use cases.

**New Digital Business Models – a Hot Topic**

In January, VDMA will publish a study on the platform economy and ecosystems in the machinery industry – an ideal opportunity for the machine vision community to re-connect with questions that were raised at the VDMA European Machine Vision Summit: How to use IoT to create new business models? Will the machine vision industry create its own platform(s)? Will an external player come and “squeeze in” between you

and your customers? Without any doubt will the digitalization of industry bring new challenges and chances to the machine vision industry and will require new digital business models. It’s rated as important topic. More and more players not only in IT, but also in the machinery industry have started with activities. VDMA’s role is to sensitize the machinery industry for the topic, give information support and guidance, as well as foster and accompany exchange among the membership.

# The Standard EMVA 1288 for Camera Characterization

## More than Just Camera Comparison

The Standard EMVA 1288 is now globally well established. All major camera vendors are using it in their development departments and with the publication of release 3.1 a standardized data sheet is now available for easy camera comparison. But the standard is an even more useful and versatile tool to study various properties of image sensors and to discover new ones. In this way, the standard 1288 can help to use image sensors for your application in the best possible way.

“The wavelength dependency of the quantum efficiency is an optional measurement in the standard 1288.”

### What the Standard 1288 Is All About

Simply spoken, it measures what limits the quality of a camera as a component without a lens. Essentially there are four effects.

- Each time we take an image, we get different values. This effect is called temporal noise. This effect also causes homogeneous regions to look noisy.
- Each pixel gives a different response. This effect is called spatial nonuniformity and also causes homogeneous regions to look noisy. For a camera with a linear response there are two basic types of nonuniformity. Each pixel can have a different offset, the dark signal nonuniformity, or DSNU, and each pixel can have a different sensitivity, the photoresponse nonuniformity, or PRNU.
- There is also a response if no light hits the image sensors and this signal increases

with the exposure time and with it the noise in the image is increasing. This effect is called the dark current and limits the ability of an image sensor to see in the dark.

- Finally there are many types of artefacts, which means that the image sensor does not show an ideal behaviour. An important type of such an artefact, which was introduced with CMOS sensors, is the shutter efficiency. It turned out that the image sensor has a residual sensitivity even if the electronic shutter is closed.

### How Are the Measurements Performed?

Three types of measurements must be performed:

- An illumination series from the dark to saturation in order to measure the standard deviation of the temporal noise in relation to the mean received signal. The essential quality parameters from this measurements are the standard deviation of the dark noise and the signal-to-noise ratio SNR.
- For a linear camera it is sufficient to measure the nonuniformities in the dark and at 50% saturation. From these two measurements the DSNU and PRNU can be computed.

*Continued on page 14*

**More information on the EMVA 1288 standard**

- Standard documents: <http://www.emva.org/standards-technology/emva-1288/emva-standard-1288-downloads/>
- EMVA 1288 user community with data sheets: <https://zenodo.org/communities/emva1288/>
- Wiki page: <https://en.wikipedia.org/wiki/EMVA1288>

- The dark current is estimated from a series of measurements applying no light to the camera but varying the exposure time.

**Wavelength Dependency of the PRNU**

The standard EMVA 1288 requires to perform the measurements for monochrome cameras only for one wavelength close to the maximum sensitivity, typically with green light. Thus the interesting question arises, which parameters measured by the standard depend on the wavelength of the light. This is for sure the sensitivity of a camera expressed by the quantum efficiency, i.e., which fraction of photons are converted into charge units, which are converted into a digital number by the camera. The wavelength dependency of the quantum efficiency is an optional measurement in the standard 1288. But do other parameters also depend on the wavelength of the light?

This can easily be checked by performing 1288 measurements with different wavelengths. For this purpose an eight-color light source from Aeon, Hanau, Germany, with very low inhomogeneity for the sensor sizes used ( $< 0.3\%$  absolute, colour match of homogeneity better than  $\pm 0.15\%$ ) was used to investigate these effects, covering wavelengths from near UV (368 nm) to near IR (943 nm). This study was first published at the 2nd European Machine Vision Forum in Vienna in September 2017.

The residual colour PRNU was computed by dividing the PRNU at each colour by the PRNU averaged over all eight colours and plotting the difference from one in %. It is really surprising to see the very different re-

” The most critical case is if you use a monochromatic sensor and not to know the colour of the observed objects and/or the colour of the light source applied.“

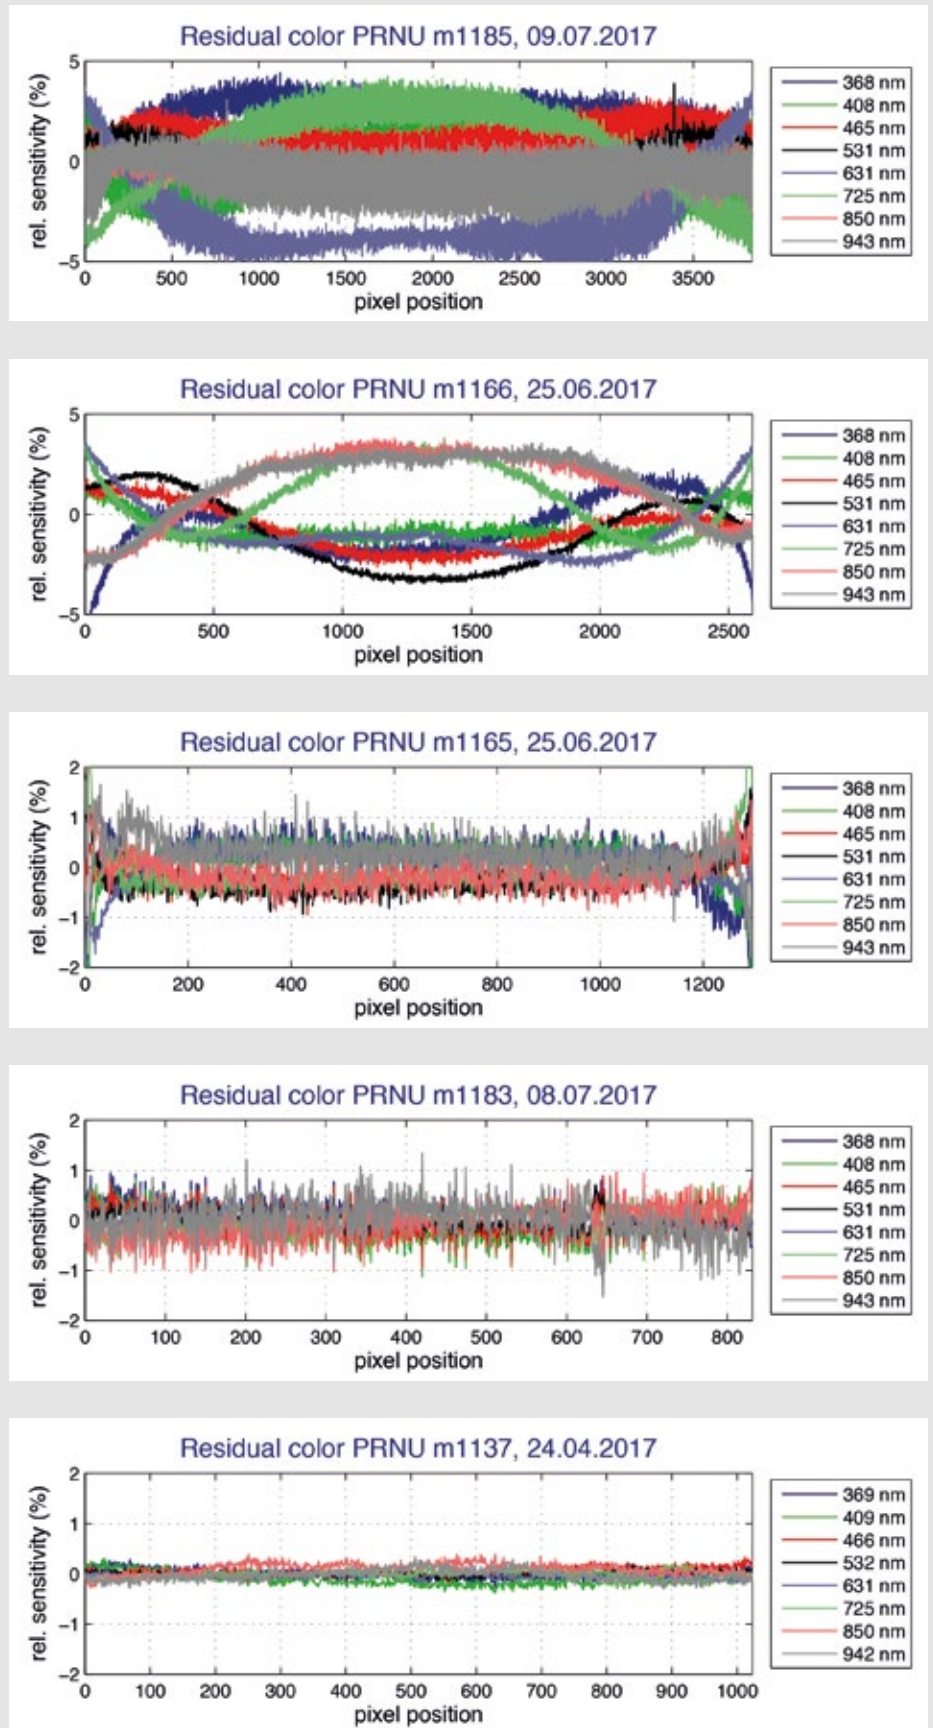

Fig. 1: Residual colour PRNU of monochrome image sensors after correcting pixel by pixel for the average PRNU of eight colours for (from top to down) the rolling shutter CMOS Aptina sensors MT9J003, MT9P031, the Sony CCD sensor ICX445, and the global shutter CMOS sensors Python 500 from OnSemi and Pregius IMX174 from Sony.

Table 1: Quantitative comparison of the PRNU measured at 50% saturation of the same five image sensors shown in figure 1. The second column shows the standard deviation of the temporal noise at 50% saturation, the third the standard deviation of the PRNU as defined by EMVA 1288, the fourth the maximum standard deviation of the residual colour PRNU, and the last column the same high-pass filtered, i. e., considering only the variations from pixels in close neighborhood.

Sensor	Temporal noise	PRNU1288	Residual colour PRNU	Residual colour PRNU high-pass filtered
Aptina MT9J003 1.67 µm Pixel	3.25%	0.41% (531 nm) to 4.8%	<3.9%	< 1.4%
Aptina MT9P031 2.2 µm Pixel	1.73%	1.64% (631 nm) to 3.9%	<2.0%	< 0.24%
Sony CCD ICX445 3.75 µm Pixel	1.72%	0.57% (465 nm) to 1.19%	< 0.84%	< 0.28%
OnSemi Phyton 500 4.8 µm Pixel	1.77%	0.99% (725 nm) to 1.25%	< 0.46%	< 0.33%
Sony Pregius IMX174 5.86 µm Pixel	0.77%	0.33% (532 nm) to 0.38%	< 0.20%	< 0.06%

### EMVA's Educational Initiative

The European Machine Vision Association (EMVA) has started an educational initiative to serve the Machine Vision Community. A first example is the free webinar "How to compare cameras with the new EMVA 1288 standard, Release 3.1", which was held on September 12, 2017 and has been recorded, see <https://www.viewservice.de/EMVA-Webinar/7466/>

sults, demonstrated in figure 1 and table 1 with five sensors. The two rolling shutter sensors with small pixels show very large variations in the PRNU with the colour of light up to almost  $\pm 5\%$ . The pixel-to-pixel variations (high-pass filtered PRNU) are very much different for the two sensors: 1.4% in comparison to only 0.24%. The two global shutter CMOS sensors are equally good or better than the CCD sensor ICX445 and the first generation Sony Pregius sensors show by far the best values.

### What Does this Mean in Practice?

It depends on your application. The most critical case is if you use a monochromatic sensor and not to know the colour of the observed objects and/or the colour of the light source applied. Then you have no other choice but to use a sensor which exhibits only a low residual colour PRNU, if the PRNU is critical for your application. If you know the colour of your light source, then you can use almost every sensor and correct the PRNU for this colour, which leads to much

better results than the PRNU correction of the manufacturer, which is normally done with white light.

### Conclusions

The example of the colour dependency of the image sensor PRNU nicely demonstrated how useful the equipment and measuring procedures of the standard EMVA 1288 are in doing the right thing to get better image quality. It was just required to perform measurements under different conditions, here simply a light source with different colours to achieve this result. In a similar way, the equipment and tools developed for the standard can be used to investigate many other properties of image sensors and to discover other artefacts. It is for instance possible to study the change of image sensor properties over time, with the temperature of the environment or different exposure times. You name it.

Illuminating the virtually  
impossible  
in machine vision?

Your Solution is Polytec.

### Expertise in a wide variety of lighting solutions

Optimum illumination is critical if you wish to realize an application with a high level of process reliability. Polytec offers you a comprehensive range for this purpose: a variety of lighting heads and light colors for continuous light, switching and flash operation. Polytec lighting systems are available in a large number of standard sizes, individual designs, and naturally also with protective housings for harsh environments.

# Industrial Cameras, Technical Features, and Market

Imaging Industry Market Study 2017

Each year, in cooperation with the trade journals Vision Systems Design and inspect, global imaging expert Framos identifies technical and commercial trends in the industry based on users' and manufacturers' views. For this 10<sup>th</sup> market study, 90 manufacturers and users from 22 countries responded to questions about the status quo of the imaging market, and its ongoing development.

In the Age of Automation and the Smart Factory, classic machine vision is the cornerstone of success for the Imaging industry. CMOS technology and fast processing are enabling real-time precision, while cognitive vision solutions using artificial intelligence are the bases for further growth. Customized embedded vision is expanding into a wider range of industries and innovative applications, boosting their performance and efficiency. Integrated image processing, which provides a combination of reliability, superior quality, and a high level of innovation, is now a basic building block in the digitally networked world.

This study is based on opinions from 61 users and 29 manufacturers who gave comprehensive information about the imaging market, cameras, sensors, applications and trends. European respondents, at 68%, were the largest responding group, while North Americans accounted for 19% with the rest coming from Asia and The Middle East, at 13%. Relevance ranking was carried out based on purchase or production volumes. Purchase and production were concentrated in Europe, at 61% and 50%, respectively. Also, manufacturers built more products in both Asia (24%) and North America (24%), signaling an increase in these two regions compared to previous years. The Asian and North American purchasing trends rank behind Europe, accounting for 31% and 8% of users, respectively. The Asian purchase market declined compared to last year (28%), partly because there were fewer survey participants from Asia, but these figures also suggest that the European and North American markets are stabilizing (Chart 1).

**“Automation in production and agriculture, like in previous years, is the main imaging field according to both manufacturers and users.”**

**A Market Based on Machine Vision, with Artificial Intelligence for Innovative Systems**

Automation in production and agriculture, like in previous years, is the main imaging field according to both manufacturers and users. Quality assurance is the top camera application for both manufacturers (72%) and users (49%), followed by opto-sensory measurement tasks (62% and 48%, for manufacturers and users, respectively). Also, robotics and scientific applications still represent an important part in the total imaging sales and purchase decisions, as outlined by the responders of this survey. Manufacturers reported 115% growth in the transportation

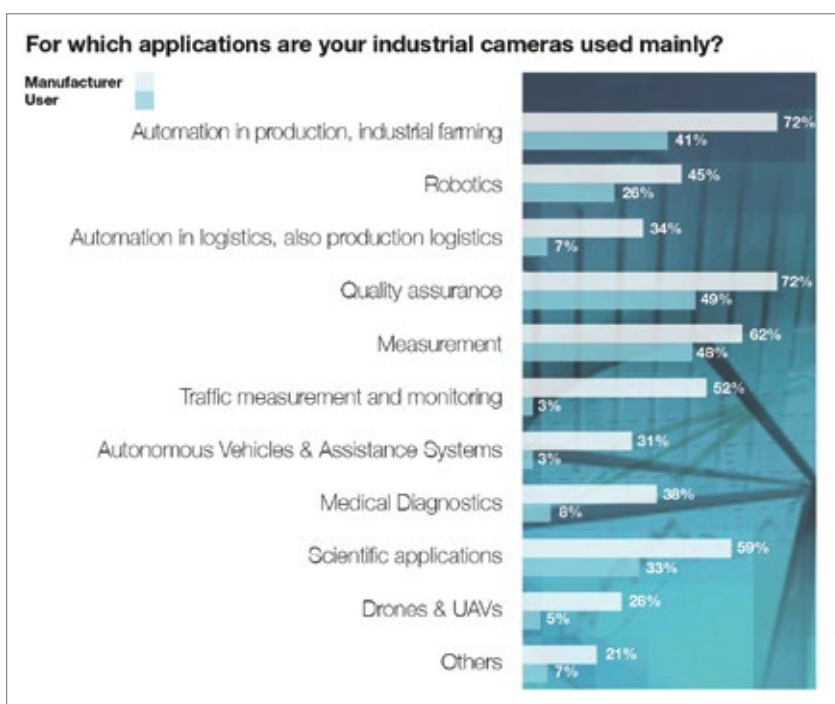

Chart 1: Industrial camera applications

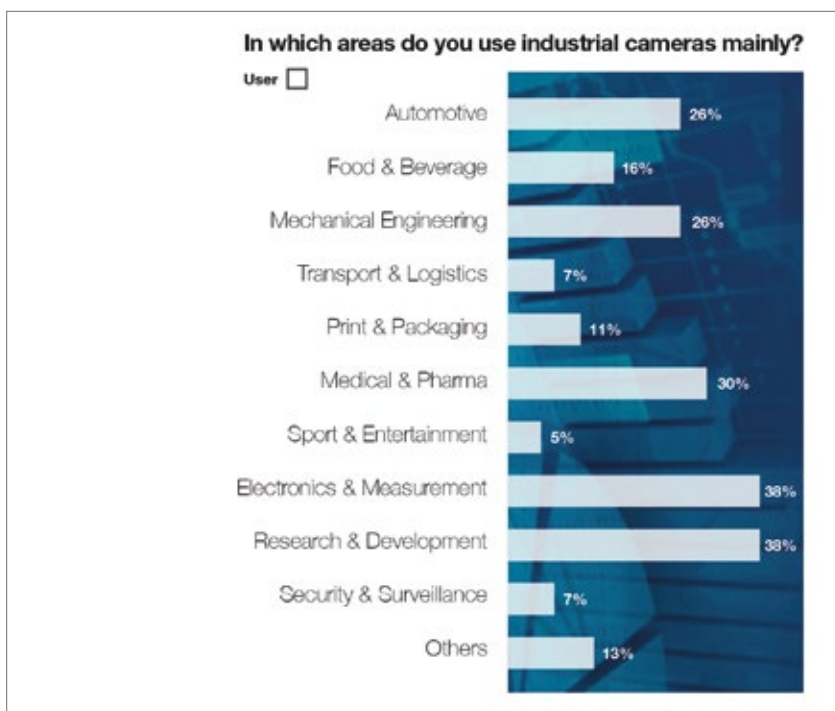

Chart 2: Image processing use by industry

sector compared to 2016, driven by autonomous vehicles and assistance systems applications. Meanwhile, medical technology was stagnant and did not grow in 2017. The fact that machine vision is expanding into more fields shows that manufacturers are capitalizing on the huge potential of innovative technologies: 28% of respondents stated that their cameras are used for drones and unmanned aerial vehicles (UAVs). Other application areas that are seeing increases include those based on artificial intelligence, 3D scanning, gesture control, and virtual re-

ality. While users recognize this potential, they are still firmly focused on traditional machine vision applications (Chart 2).

At the industrial level, electronics, mechanical engineering and measurement technology continue to dominate both production and sales; in fact, they increased their lead slightly compared to 2016. The automotive industry remains a key player, albeit with a 17% drop compared to last year. Users and manufacturers agree on the importance of the R&D sector, including the

*Continued on page 18*

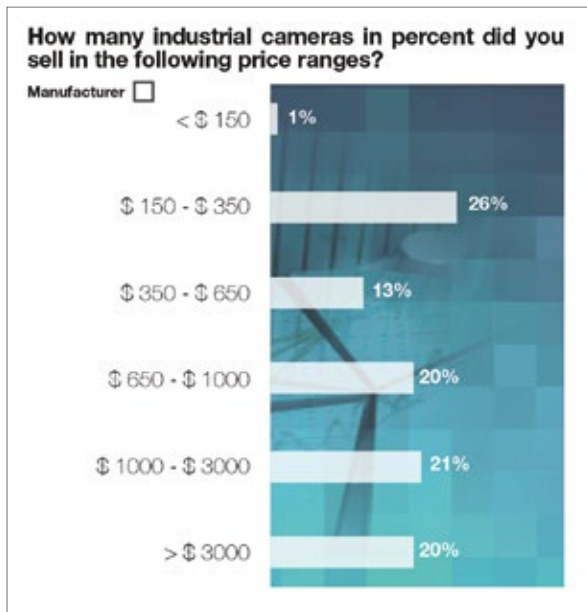

Chart 3: Industrial camera price ranges, manufacturers

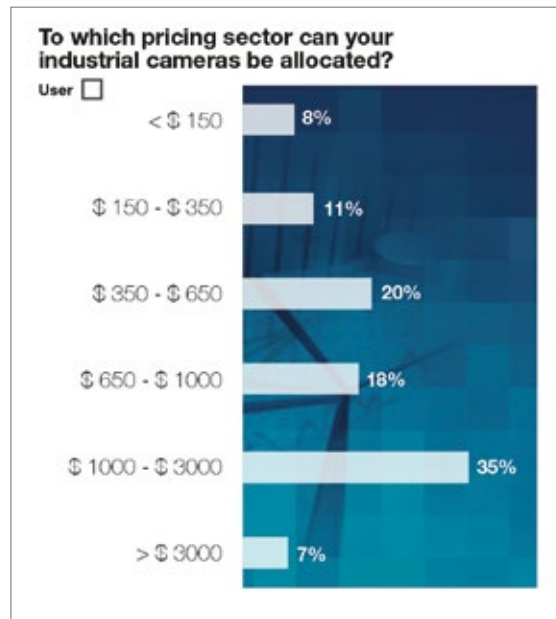

Chart 4: Industrial camera price ranges, users

medical and pharmaceutical fields, which retained their positions in the ranking. Other significant verticals for manufacturers are the food and beverage, print and packaging, security and surveillance, and, logistics. A growth area identified by manufacturers includes the multimedia and entertainment markets.

Generally, manufacturers who respond naturally cover a broader range of applications and industries than do users, who tend to be concentrated in certain markets. Manufacturers are more innovation-driven, while users are more focused on traditional vision applications.

**Sustained Investment Confidence, Embedded Vision, and Possible Market Fragmentation**

Camera manufacturers' main customers are OEMs and system suppliers who make up 39% of their customer base – an increase of 30% compared to 2016. This increase underlines how the imaging market is moving toward embedded vision with more complex systems and requirements. Consequently, end users are becoming less significant (-63%), but this trend is largely offset by increased sales by distributors acting as intermediaries and consulting vision experts. System integrators remain a stable customer segment at 31%. Both of these trends clearly show that users are looking to the technical expertise of external partners to develop their integrated systems. Fifty-seven percent (57%) of users stated their vision systems were developed and implemented in-house, however, this is a declining trend – shown by an 11% drop from last year – which infers that they are more likely to seek support from value added distributors

“Overall, the status of machine vision as a stand-alone discipline is on the decline as it becomes more of an embedded component to a more complete solution.”

more often in the coming years. Twenty-four percent (24%) bought a complete system (a 9% increase) with only 13% supported by a system integrator. Given this increase, the proportion of system integrators remained consistent at 54%. This is significant in terms of the role that intermediaries and experts are playing between manufacturers and end users.

Manufacturers predict strong and secure ongoing growth in the machine vision industry. Thirty-eight percent (38%) expect this growth to be driven by new users; 21% by the modernization of existing systems; and, 41% by customers who require a mix of the two. Manufacturers see artificial intelligence, 3D imaging, hyperspectral imaging, and embedded vision as key drivers; and, 21% of manufacturers see embedded vision as an opportunity to grow further. The vast majority of users (91%), plan to continue investing in imaging with 52% of them intending to introduce either new or modernized vision systems over the next two years, while another 39% anticipate doing a mix both types of investment. In line with the users in more traditional application fields and industries, 75% stated they would be using off-the-shelf (OTS) components with 39% of all user re-

spondents stating they would like to develop their own solutions. This result outlines what manufacturers see as the risks of traditional machine vision markets: where 17% of them believe that expansion into almost every industry will fragment the imaging market, due in part to industrial use of consumer devices. Also, twenty-one percent (21%) feel that their business could be severely impacted by users who develop and build their own unique cameras and systems.

Overall, the status of machine vision as a standalone discipline is on the decline as it becomes more of an embedded component to a more complete solution. Forty-three percent (43%) of users are currently using embedded vision as part of their integrated automation and control systems. Despite a predicted increase in market growth, some manufacturers were skeptical of this: though users are not about to defect en masse to the Asian market, 59% of manufacturers see competition from this region as a threat. In addition, 38% are still concerned about the risks relating to embedded vision, like industrial cameras being replaced by specific embedded solutions, as well as changes to traditional business models. As a result of the growth and ongoing development of machine vision technologies, the classical roles for manufacturers, integrators, and users are evolving and being constantly challenged. Embedded vision and the use of imaging technology in nearly every industry points to fragmentation. Users need and want specific solutions for their integrated systems and OEM solutions. This scenario is an opportunity for consulting distributors and system integrators to demonstrate their role as both advisors and partners in the development and implementation of individual and mod-

ular embedded vision solutions, far removed from the traditional industrial camera.

**Healthy Price Levels, Matrix Cameras, and Global Brand Awareness**

Besides the inherent desire for users to purchase cameras, the price range of these cameras is a key market development indicator. After a gradual decline in prices prior to and including 2015, the cost of mid- and high-price cameras is noticeably more stable in 2017, which should lessen manufacturers' concerns about low cost Asian competition (See Chart 3). Only 19% of users limited their budget to \$350 for a camera, compared to 45% in 2016. Users paying between \$350 and \$1,000 (38%), or more than \$1000 (42%) increased as compared to last year (+7 and +19 percentage points, respectively). The high price segment is clearly growing because more performance is now being added to higher priced cameras. User trends are largely confirmed by manufacturers, es-

pecially in terms of a decrease in demand for cameras priced below \$150, and the steep increase for those over \$1,000 (See Chart 4). Market fragmentation, embedded vision and highly specific modular vision systems also appear to be promoting quality awareness. Superior image quality with improved processing performance combined with integrated intelligence, speed, and simple connectivity, are key criteria for „smart“ investments with good price-performance ratios.

In the 2017 study, demand was mainly for the type of cameras used in vision systems. Area scan cameras, at 60%, are, by far, the users' top choice followed by 3D and stereo vision cameras (8%), and OEM camera modules (8%). Twelve percent (12%) of users utilize a custom designed camera to solve their imaging problems. Seven percent (7%) use line scan cameras and only 5% use smart cameras – representing a sharp decline for smart cameras compared to 27% in 2016. A significant proportion of those

who have changed their usage of smart cameras are likely now using area scan cameras. These cameras, like smart cameras, can be equipped with all the necessary features in a compact form. The view among manufacturers is more balanced: 37% sell area scan cameras, followed by 18% for 3D and stereo vision, 16% for smart cameras, and 10% for OEM modules. However, 16% sell cameras for various special solutions, which clearly plays a key role in their revenues.

The camera brand best known to users is Sony, with 67% brand awareness – no doubt influenced by its reputation as a high-quality sensor provider and its many consumer products in various segments. Basler and Baumer, each with 59%, and Flir (former Point Grey) with 56%, are all vying for second place behind the top brand. Among users, 54% are familiar with Matrox, Teledyne Dalsa and JAI. However, when it comes to actual use, Basler is the most popular brand

*Continued on page 20*

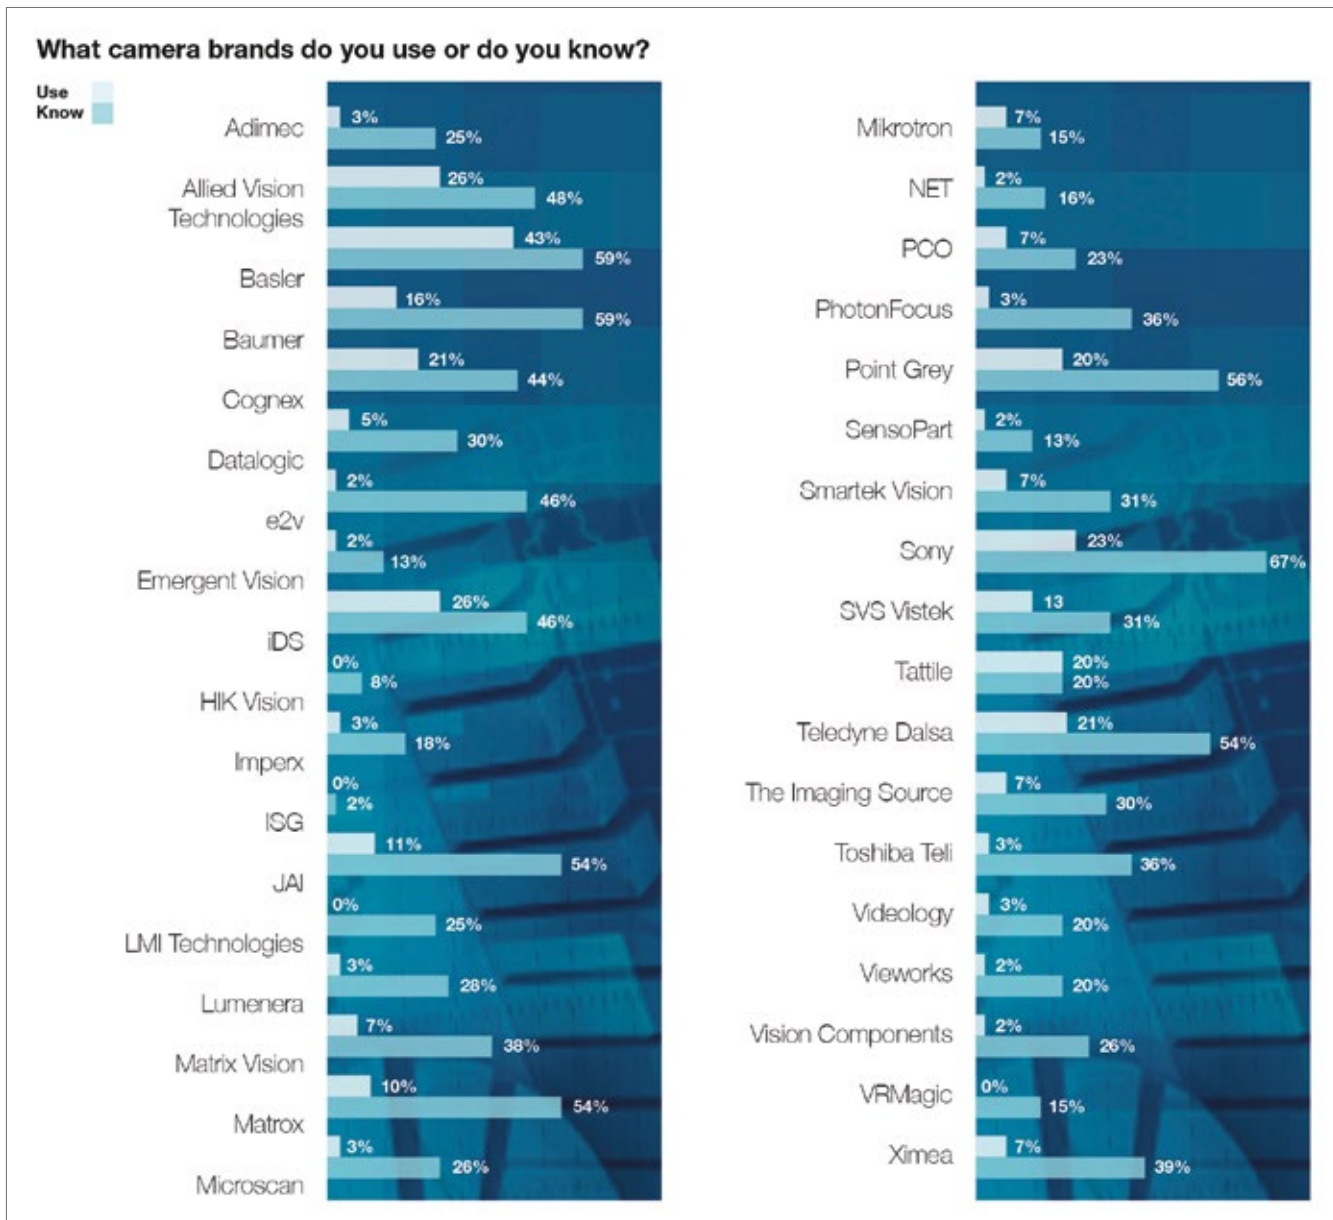

Chart 5: Camera brand awareness and usage

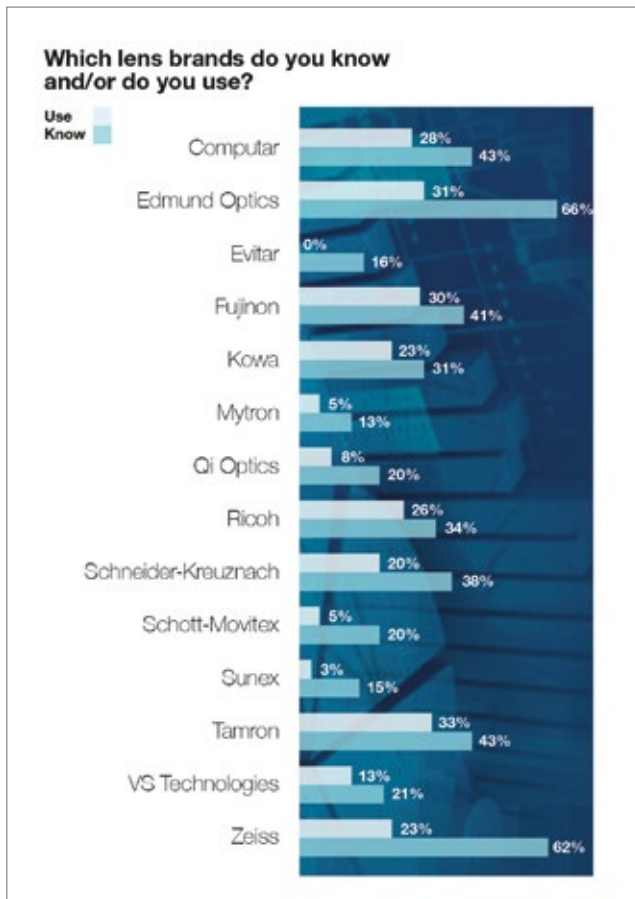

Chart 6: Lens brand awareness and usage

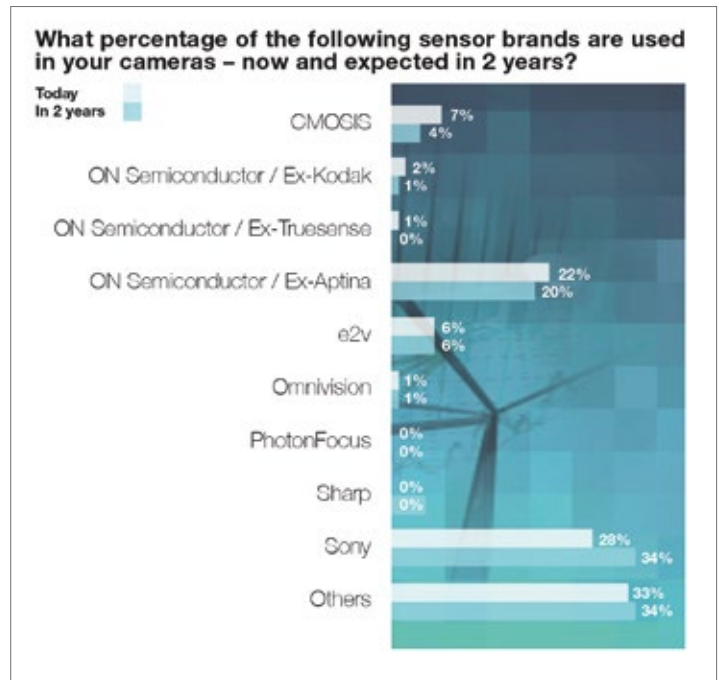

Chart 7: Sensor brand usage, manufacturers

(43%), followed by Allied Vision and IDS (26% each); then, Cognex, Sony and Teledyne Dalsa follow with 21% each (Chart 5).

In conjunction with cameras, optics is an important part of any vision systems. The best known optical brand is Edmund Optics at 66%, higher than Zeiss, at 62%. Whether this is due to in-house Edmund lenses, or a familiarity of the distributor's name with users is not clear from the results. Computar and Tamron share third place in user brand awareness at 43%. However, when it comes to actual usage, Tamron lenses are employed by 33% of users – more than any other brand – followed by Edmund Optics and Fujinon at 31% and 30%, respectively (Chart 6).

**CMOS Is the New Norm, Sony and On Semi Remain Popular, and Customized Sensors Gain Momentum**

The previously announced decline of the CCD sensor usage is more evident as the switch to CMOS sensors is nearly complete: today, 73% of manufacturers and users employ CMOS technology, while the remaining 27% are still using CCD. This has been accelerated by Sony's discontinuation of CCD technology. The study predicts that CCD usage will fall to 22% among manufacturers and 12% among users – a clear confirma-

tion of recent forecasts and changes in the sensor market landscape.

After the groundbreaking technological innovations and resulting upheavals in recent years, the sensor market is showing signs of stabilization. Sony remains the clear market leader with 49% of users, and lost only 4 percentage points compared with 2016. ON Semiconductor's share changed little at 30%, and the projected 175% growth over last year in customized sensors, increasing their market share to 11%, has been achieved. At 9%, Cmosis still plays a significant role for users in a clearly segmented sensor market (See Chart 8). Manufacturers are still fiercely loyal to Sony, with percentages similar to those from 2016. Although Japan's top dog leads the market at 28%,

in-house development is a serious threat to traditional suppliers. According to manufacturers, 33% of their cameras are currently using customized sensors. ON Semiconductor has a 25% market share, almost bringing it level with Sony. Meanwhile, Cmosis, holds on to its 7% market share. It is clear that camera manufacturers desire themselves to be far more independent of major suppliers and their potential limitations. Customized sensors allow manufacturers to respond more effectively to individual customer requirements, and those requirements for specific embedded vision components (Chart 7).

**Innovative and Groundbreaking at the Same Time: It's All About the Application Area**

What criteria are important to users and manufacturers when it comes to selecting and using a specific sensor? CMOS sensors are the new industry standard coming with high quality for those more demanding vision applications. The new market potential in VR/AR, autonomous vehicles and aircraft, intelligent automation and robotics solutions require high sensitivity and high quality for real-time processing and control. On the other hand, the traditional machine vision market still uses lower resolutions, monochrome sensors, and lower frame rates. These are perfectly sufficient for clas-

“ CMOS sensors are the new industry standard coming with high quality for those more demanding vision applications.”

sic measurement and testing, like when it comes to inspecting the fill level inside a bottle on a conveyor belt traveling at 2 m per second, little more is required for automated quality inspection.

The breakdown of the required criteria by application is clear from the survey data on technical sensors. Looking at sensor resolution first, the main category being used is between 1 to 3 megapixels and comes in at 40%. Although this figure represents a decrease of 15 percentage points from 2016, users expect this category to remain stable over the next two years. Last year's smallest usage category, that of sensors with less than 1 megapixel, made a modest gain of 22%. Meanwhile, the high-resolution category, the one between 10 and 20 megapixels, increased significantly. Based on the feedback received, combined with the increased use of innovation-driven vision applications, manufacturers reported a decrease in all sensor categories under 5 megapixels but was offset by a rise in all those over 5 megapixels. While the 1–3 megapixel range remains in the lead at 24%, the sensors forecasted to grow most significantly are those in the 5 to 10 megapixels range, and 10 and 20 megapixels range, at 88% and 67% respectively. However, in traditional machine vision, stable manufacturer forecasts for VGA resolution show that it remains an important component of their sales.

With sensor image formats, a little more than two-thirds of users prefer a 1/3–2/3 inch sensor format, while one-third (33%) of users use a 1/2 inch and a 2/3 inch sensor format. This result is a clear shift toward the higher format category compared to last year, and is probably driven by increasing requirements for image and analysis quality. Despite big advances in miniaturization of sensors and their respected pixel sizes while still providing equal or even improved performance over previous generations, bigger pixel sizes ensure better utilization of incidental light. Sensors used by manufacturers varies widely by application area: 35% use very large sensors over 1 inch, and 27% use small sensors from 1/2 to 1/3 inch. Also, manufacturers are increasingly implementing color sensors in their designs, though the majority of users (76%) are still working with monochrome (versus 24% color). C-mount lenses, at 45% (users) and 46% (manufacturers), are the dominant lens type, with a strong tendency toward custom solutions. Manufacturers categorized 34% of versions as „Other“ (special solutions) for their lens mount of choice, but 19% of users also specified this category when asked the same question. A significant majority of users seek global shutters as an on-sensor readout technology, thereby benefiting from excellent image quality without motion blur, especially in fast moving applications.

“The demand for high speed imaging systems for data analysis and control in real-time is driving developments in image frame rates and data transmission standards.”

**High Image Frame Rates and High Bandwidths Are Making Real-Time Processing Feasible**

The demand for high speed imaging systems for data analysis and control in real-time is driving developments in image frame rates and data transmission standards. Here too, the split between moderate-speed traditional machine vision systems and innovative high-speed applications is marked. The use of cameras below 25 frames per second (fps) recovered significantly at 51% this year, while there was a corresponding decrease in last year's main category, that being the 25 to 60 fps group. However, applications using devices running at 60 to 100 fps doubled from 7% to 14% in this year's study. Manufacturers report that image rates between 25 and 60 fps are still their bestsellers, and are forecasting robust growth in their high-speed product lines: 60 to 100 fps (+53%), 100 to 200 fps (+67%) and over 200 fps (+21%). This growth is a clear signal that users are looking for faster speeds from their imaging products (Chart 9).

Despite the difference in user and manufacturer responses about image rate requirements, almost 50% of users view transmission rates of more than 5 gigabits per second as relevant or very relevant to their applications, which is expected to rise more than 70% over the next two years. Real-time monitoring and analysis is one of the key benefits and is a driver for continued development when it comes to vision technology expansion. Fast image rates and rapid transmission of the data for immediate processing are seen as a must for high-precision applications. Users are recognizing this potential thus see the logical conclusion as a shift toward higher speeds (Chart 10).

When it comes to data interfaces for imaging systems, GigE Vision is the most accepted transmission standard among manufacturers and users, at 27% and 26%, respectively. FireWire and CoaxPress gained ground compared against the 2016 poll, but this might be a result of a different respondent mix in this year's study. Where future high-speed interfaces are concerned, users (at 48%) and manufacturers (at 62%) agree: 10GigE is going to be used to quickly transmit high data volumes in the near

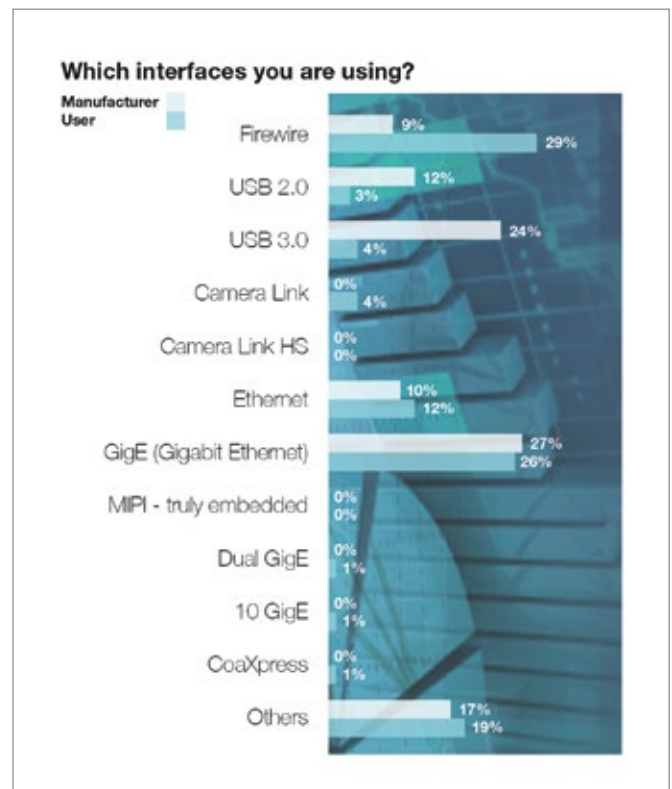

Chart 9: Interface usage

term. The ongoing development of the GigE Vision standard predicts a simple upgrade and straightforward connectivity, without additional components. Frame grabbers, despite a decrease of about 10%, retain their position and their justification for specific applications: more than a fifth (+20%) of both manufacturers and users employ them and plan to continue into 2019.

**A Steady Trend: Precision, High Performance and Efficiency, Plus Ease-of-Use**

“As always, the comments received are the most interesting aspect”, says survey sponsor and Framos CEO Dr. Andreas Franz. “Alongside the purely technical survey data, these comments give us a completely unfiltered view of what participants expect from the imaging market and what kind of developments they are predicting. Since the survey guarantees anonymity, both manufacturers and users gave very revealing answers on their feel for the market and forthcoming changes.”

In an era of zero-error production of systems starting at a small batch size of 1, many users emphasize the importance of greater precision in automation, measurement, and testing. They expect to achieve this goal through improved vision performance using higher resolutions, better sensor technologies, and high image frame and transmission rates to retrieve and consume this data very rapidly. At the same time, higher

performance must come in at lower costs and at better price-performance ratios to make it viable for them to implement it into their systems. In particular, smaller operators along with new application markets are looking to capitalize on this improvement in efficiency but profitability and ROI (return on investment) are major factors across the

“In an era of zero-error production of systems starting at a small batch size of 1, many users emphasize the importance of greater precision in automation, measurement, and testing.”

board in their decision process. Participants, as in last year’s study, stated that imaging must have a clear benefit for them but also needs to keep them profitable.

The conditions for further growth are still the same this year according to users who also stated a need for easy system integration and straightforward component assembly. User-friendliness, open source software and libraries, intelligent algorithms, and consistent interfaces are a must for most

users to allow for ongoing growth in imaging. These results come as no surprise considering the most recent vision system customizations and more frequent in-house implementations. Also, users expect the whole vision system to be supported by data security and wireless connections. Users want to expand the potential of their imaging applications with more analysis options, while maintaining and improving on quality assurance and significant production optimization.

Along with Smart Factory optimization and traditional machine vision, users see huge potential in embedded vision technologies for 3D applications and in deep learning using artificial intelligence. The imaging landscape, given the exhaustive application potential of sensors, has an opportunity to conquer and revolutionize new industries where the majority of users are still deliberating over specific applications. This is a big opportunity for system integrators and value add distributors to generate new custom solutions with practical examples and use cases, and to increase the market penetration of imaging systems.

**Artificial Intelligence, Human-Machine Teamwork and Innovative Applications**

Manufacturers agree with users on the following points: they are looking for higher performance at lower prices from vision technologies, and they want good usability and consistent interfaces. Manufacturers

“User-friendliness, open source software and libraries, intelligent algorithms, and consistent interfaces are a must for most users to allow for ongoing growth in imaging.”

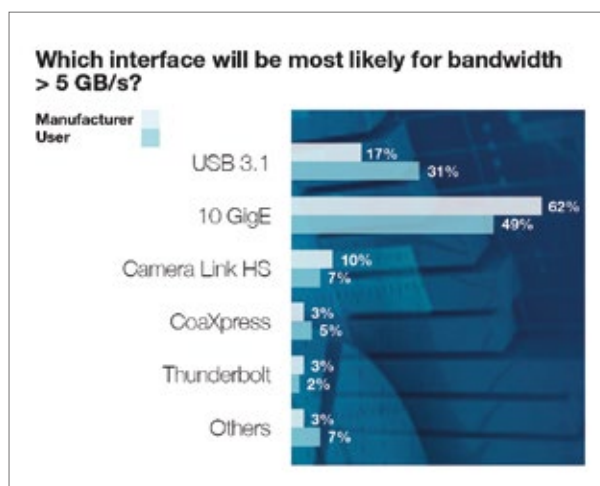

Chart 10: Bandwidth relevance

make it very clear that quality is a top priority, both in terms of differentiating themselves from Asian competitors, and to gain a solid foothold in new markets with more demanding requirements. Consequently, alongside increased automation and the Smart Factory, manufacturers have a far greater focus for using artificial intelligence. In their view, human-machine collaboration, specifically in robotics, and an increasing number of autonomous driving and aviation systems are key areas of growth. The new imaging solutions from Intel and Nvidia, who have capitalized on their processing expertise to produce innovative, cognitive vision systems, were frequently mentioned in manufacturers' comments. They believe the entire imaging industry will reap the benefits of this innovation. One obvious conclusion is that it will drive expansion into new industries, and into more consumer segments. Demands for standardization should help mitigate the resulting fragmentation and customization often seen with new technology introductions.

**Conclusion**

The results of the Framos 2017 Market Study clearly indicate that imaging is no longer a standalone discipline, but is increasingly an integral part of modern automation and control systems. Along with traditional machine vision applications, embedded vision now provides the capability to analyze images at lightning speed and to make independent decisions based on the captured visual data. The real growth potential of vision technology rests on increased penetration into the Smart Factory, together with the innovative use of artificial intelligence in new industries and consumer markets. Visual sensor technology is equipping machines with human senses and human intelligence, giving them the capability to “sense”, understand, interact, and learn. New types of consumer goods, safety features, and industrial solutions are becoming viable thanks to reliable wireless devices like those used for eye-tracking, gesture, and face recognition. Self-aware robots, collision avoiding drones, and reliable monitoring solutions are just a

few examples that are expected to be seen in industry. Now, smart homes can be controlled with a swipe of a finger, and cars can automatically brake if they detect the driver falling asleep at the wheel. Imaging is becoming a fundamental building block of the digitally networked world and is contributing to greater efficiency, security and comfort in every area of life.

Components, objectives and OEM imaging modules for industrial machine vision and biotechnology machinery

# Relevant Content and Related Products

## Linking Editorials to Fitting Machine Vision Components

inspect is keen on consistently providing you with high-quality information about latest market trends, technologies, case studies and more. The goal is to support the business success of inspect readers in industrial imaging. Now, inspect is going one step further: A new project with an online product platform for machine vision components will show how readers obtain instant product overviews tailored to the editorial content of their interest.

Imagine you are reading an article about the features of the new image sensors with CMOS Global Shutter technology. Appealed by the promising new opportunities, you likely want to find out, which cameras based on these sensors are available right now. What would you normally do? Probably, you would browse to the

websites of your various preferred camera vendors, click your way to the product overview pages on each site, and you would try to find out by reading through the specs of the latest models.

Now inspect features an easier and faster way: Within a joint project with the online platform Imaging market, selected articles

Fig. 1: Sample QR-code linking to CMOS global shutter cameras

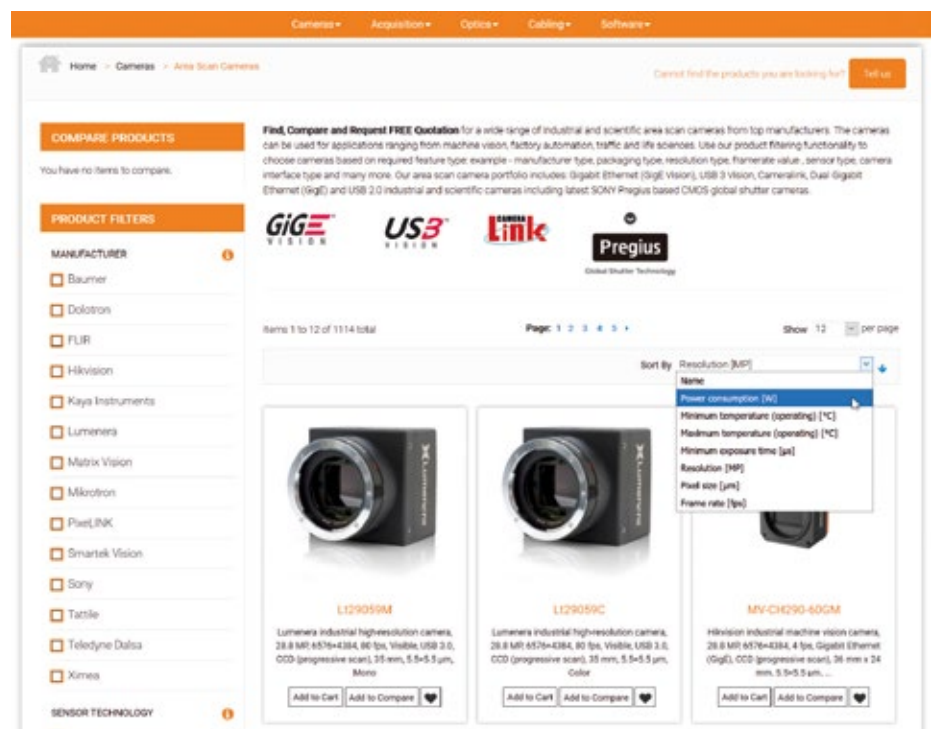

Fig. 2: Filtered and sorted selection of area scan cameras

” Links to featured editorial content on inspect-online.com can be found on Imaging.market, providing useful background information with technical articles and application stories.“

on inspect-online.com will now provide one or more links to the online platform, showing you e.g. the tailored selection of machine vision cameras that utilize the CMOS global shutter sensors of interest. On the other hand, links to featured editorial content on inspect-online.com can be found on Imaging.market, providing useful background information with technical articles and application stories.

Additionally, relevant print articles in the inspect journal will provide QR-codes which lead directly to the corresponding online articles with all the links to the Imaging.market online platform.

### Looking through Product Categories

A traditional imaging system consists at least of four types of components: lenses, cameras, cables, and processing units. Often also lights, optical filters, extension tubes, frame grabbers, and advanced software libraries come into play. This makes it nine completely different product categories. Due to the current shape of the machine vision market, most OEMs produce only one single category of component. Thus, just finding suppliers for each product category, selecting one, and asking for a quotation is a considerable effort. What makes it worse, many organizations require developers to select at least three different suppliers per product category and to request quotations from each. A task that takes easily several months, delays development, and prolongs time-to-market, left alone the costs.

It is the mission of the Imaging.market product platform to improve, simplify, and accelerate the selection process of imaging components for vision system designers. Therefore the platform provides highly detailed product filtering and sorting features. For example, area scan cameras can be filtered by 12 different attributes, from manufacturer, frame rate, and resolution, to criteria like the image sensor brand or the sensitive spectrum. Once a buyer has filtered the portfolio of currently over 1,100 cameras from 14 OEMs based on his application requirements, he can sort the remaining selection by attributes like the minimum exposure time, power consumption, or min./max. operating temperature (see fig. 2).

Figure 3 shows the distribution of area scan cameras available on Imaging.market by resolution and frame rate. The radius of the circle indicates the number of cameras available with a certain specification, influenced by the image sensor type, the camera interface, and its technical design. While the portfolio is continuously growing and will comprise latest cameras with resolutions of 50 megapixels and more, the chart already indicates the broad coverage.

### An Independent Product Finder

While various distributors also feature a more or less comprehensive range of machine vision components, their portfolio is designed to avoid internal competition among different brands. Thanks to the independence of

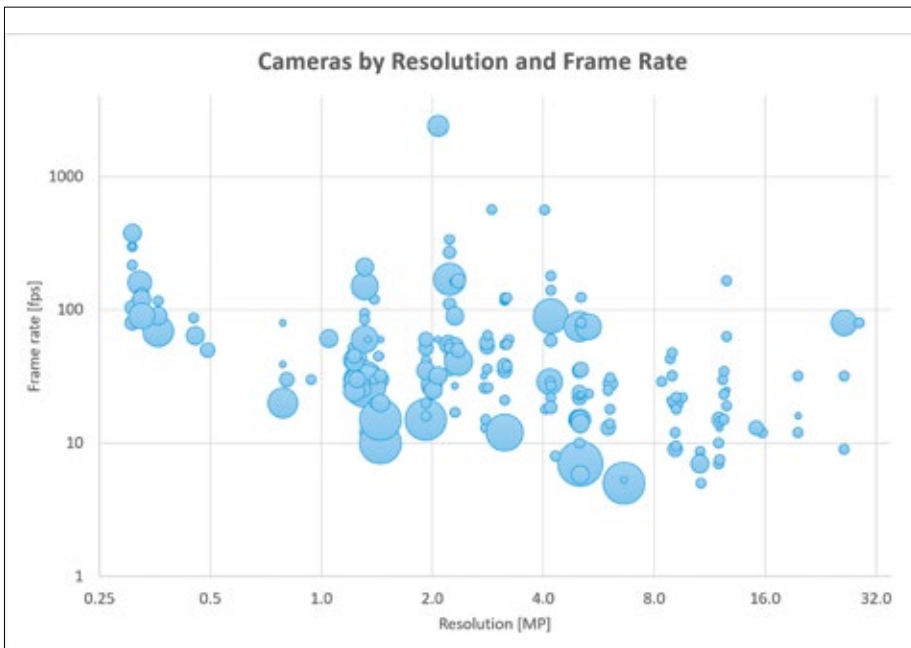

Fig. 3: Distribution of cameras by resolution and frame rate

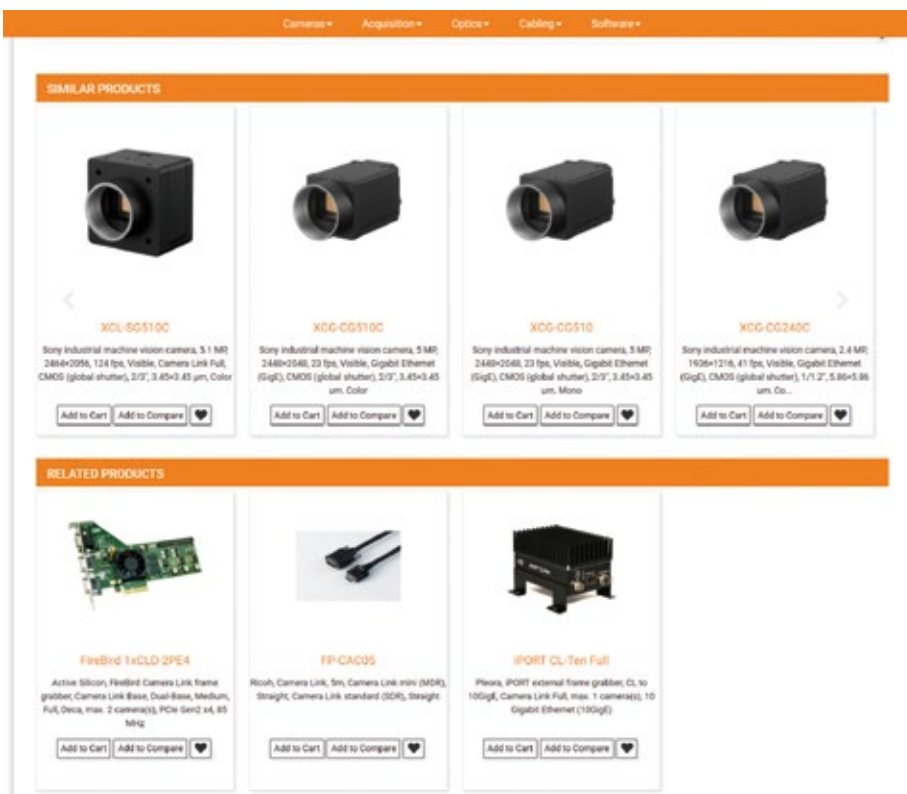

Fig. 4: Cross-linking with matching related products simplifies the system design process.

Imaging.market, this product finder is specifically designed to allow for the comparison of competing products.

For that purpose, a developer can dive in the details of each camera once he has narrowed down the selection to a handy number. Every product on the platform is specified by up to five vendor-defined unique selling propositions (USPs) as well as a comprehensive and standardized set of attributes, over 70 in case of area scan cam-

eras. Only this standardization allows for the filtering and sorting but also for a convenient side-by-side comparison over all camera features (see fig. 3). Furthermore, every vendor is given the opportunity to add a detailed description of the camera and/or the manufacturing company as well as videos and various downloads, such as datasheets, manuals, white papers, case studies, CAD-data and the like. Currently close to 2,800 product-related files are available for download. Thus, every

manufacturer has the opportunity to meet their customers' increasing desire of educating themselves about product features and the manufacturers' companies before talking to a sales representative.

To simplify the design process of a vision system, Imaging.market users obtain links to matching products. Figure 4 shows two exemplary frame grabbers and a cable which would well interoperate with the currently selected camera utilizing a Camera Link Full interface.

Finally, when a buyer has identified the set of cameras, lenses, cables and other components which fulfill his requirements, he can add all products to his inquiry cart and request a quotation from all manufacturers at once. This becomes especially efficient when detailed information about the application, requirements, and schedule of the development project is shared during the last step of sending the request for quotation (RFQ).

At the same time, as soft facts like responsiveness and the quality of the technical pre-sales support are decisive for many imaging

“Currently close to 2,800 product-related files are available for download.”

customers, this is a neat way to evaluate the performance of the different vendors.

### Conclusion

Machine Vision has left its adolescence since long. More and more engineers have established expertise to develop vision solutions, design systems, derive requirements and pick imaging components themselves. A key to their success is a solid source of information about current market trends, technology developments, solved applications, as well as fast access to detailed product data. The joint project of inspect and Imaging.market entirely covers these needs and constitute an innovative yet obvious adaptation to the customers' changing buying process in the age of digitization.

## About Allied Vision

For more than 25 years, Allied Vision has been helping people to see the bigger picture and give their best in whatever they do. With our technologies and our know-how we help them to be faster, more efficient, precise and performant. With a deep understanding of customers' needs, Allied Vision finds individual solutions for every application, a practice which has made Allied Vision one of the leading camera manufacturers worldwide in the machine vision market.

### Camera Solutions for Individual Requirements

Founded in 1989, Allied Vision supplies camera technology and image capture solutions for embedded systems as well as for industrial inspection, science, medicine, traffic monitoring and many more application areas in digital imaging. Our engineers design a wide range of digital cameras with a large scope of resolutions, frame rates, spectral sensitivities and sensor technologies. We have created modular platforms to ensure that your camera adapts to your requirements and not the other way around. Our job is to reliably deliver the image you need, when you need it and how you need it.

### Modular Platforms

Acknowledging the special requirements of embedded vision systems as an alternative for PC-based machine vision, Allied Vision's engineers have completely reinvented camera archi-

ecture to create a new camera platform for embedded vision. The new Allied Vision 1 product line is a full range of digital cameras designed for embedded vision applications but fulfilling the high standards of industrial and scientific image processing also referred to as "machine vision". It combines the performance of a machine vision camera and the size, power consumption and price of an embedded camera.

### High Quality

We manufacture our products according to the highest quality standards in state-of-the-art clean room facilities to deliver the precision and reliability our customers need. All our manufacturing sites are ISO 9001 certified and comply with the ISO 13485 quality standard for medical devices.

With eight locations in Germany, Canada, the United States, Singapore and China as well as a network of sales partners in over 30 countries Allied Vision offers an excellent worldwide service and support. Allied Vision is part of the TKH Group.

## About Basler

### The Future Is in Our Sight

For nearly three decades, Basler has pushed the limits of what industrial cameras are capable of. This dedication to research, development, and superior manufacturing has led us to become the world's largest producer of industrial digital cameras, with ideal solutions for factory automation, robotics, medical & life sciences, microscopy, retail, traffic, and a wide range of other applications. Our history of innovation is defining the future of vision, and our support is guiding you there. That's what makes Basler the most trusted brand and the world market leader in industrial cameras.

### We Set Trends that Set Standards

Basler has always been in on the ground floor of game-changing technology. We developed unique ways to increase our efficiency so you decrease your costs. We championed the standardization of Camera Link, GigE Vision and USB3 Vision. And we pioneered the adoption of CMOS sensors to deliver dynamic performance, high speeds and high resolution with a superb performance for the price compared to CCD. At Basler, we establish advanced technologies that offer new and immediate value to you.

### Outperforming Begins In-house

Basler has built the industry's largest and smartest industrial camera portfolio, featuring more than 300 models with GigE Vision, USB3 Vision or Camera Link interfaces to ensure that there's a perfect camera for your application. In order to support such a robust offering, we're continually investing in new ways to maximize our manufacturing and testing capabilities and make sure that each product performs in the field. Our in-house production facilities in Germany and Singapore are

living laboratories, where we learn through experience how to improve our cameras' performance in image quality, reliability, repeatability and ease of use. We're driven to grow our portfolio, so we can drive your results.

### Basler's Components Enhance Your Vision

Basler puts everything you need to get the full picture in a single place. We offer a broad range of vision components that seamlessly integrate with the camera, such as lenses, I/O cables, hubs, PCI cards and other essential accessories. All of our cameras and components are rigorously tested before they leave our facility to ensure that they deliver the high quality and reliability that you expect from Basler.

## About Baumer

The Baumer Group is one of the worldwide leading manufacturers of sensors, encoders, measuring instruments and components for automated image-processing. With around 2,400 employees and 38 subsidiaries in 19 countries, the family-owned group of companies is always close to the customer.

### Capture the Essential: Industrial Cameras and Vision Sensors

Merging cutting-edge technologies and customer-focused consultancy has made us one of the leading manufacturers for image processing components. We offer a unique range of products, from industrial cameras and vision sensors to image processing components, for many different applications across varied industries. The location in Germany accommodates R&D and production under one roof which ensures our high product quality standards. Prior to delivery, every component undergoes rigid electrical and optical testing and inspection.

### High-performance Industrial Cameras

High frame rates, exceptional image quality and ease of integration – that's what our industrial cameras stand for. Their robust, industrial design is the basis for long-term stability and precise image analysis. The portfolio includes CCD- and CMOS-based matrix cameras, standard-compliant with GigE Vision, Camera Link

and USB3 Vision. Our many years of expertise make us understand your requirements to provide the optimum product for your application. Where standard products are too limited, we work together with you to develop customized components that fit perfectly to your application.

### Easy and Intuitive Vision Sensors

Intuitive operation, fast and easy integration and configuration within minutes: These attributes characterize the Baumer VeriSens vision sensors. They can perform up to 22 different feature checks on object position and location, presence and completeness, reading and verifying human-readable imprints (OCR/OCV) or bar and matrix codes including GS1 codes. High process reliability is achieved with our patented FEX image processor. Models for color identification and inspection, with C-Mount design and integrated flash controller are also available as well as models with integrated white and infrared illumination.

## About Flir Systems

Flir Systems is a global leader in the design and manufacture of innovative machine vision cameras. Starting with the acquisition of Point Grey in 2016, Flir is developing a machine vision center of excellence with the goal of delivering best-in-class customer experiences and helping our customers be more competitive.

### Quick Facts:

- Designed and manufactured in Canada
- Global distribution network
- ISO 9001:2008 certified

### Making our Customers More Competitive

At Flir, our goal is to help our customers be more competitive. We strive to give our customers access to the latest technologies first; whether it be the latest sensors or being first-to-market with link technologies. Flir (formerly Point Grey) innovations include the world's smallest GigE camera, the world's first machine vision USB 3.0 camera, and now, a 10GigE camera.

### Delivering Excellence

To ensure our customers achieve maximum value from their relationship with Flir, we:

- Design camera systems based on what customers' current and future needs
- Manufacture and test every camera in our ISO 9001:2008 certified facility
- Offer world-class support program including quick response, friendly staff, rich online technical resources, a webstore, and regular firmware updates

## About Schäfter+Kirchhoff

Located in central Hamburg, Schäfter + Kirchhoff's headquarter is home to 35 employees. From there they manufacture high quality products that are delivered to customers all around the world.

The company was founded over 60 years ago. Starting with classical lens design and customized optical solutions the focus shifted gradually towards the now offered three product lines: polarization-maintaining fiber optics, laser lines and line scan cameras. A special focus is set on a correct and advantageous combination of precision and optical components (optomechanics), which is the basis for high quality, stability and durability.

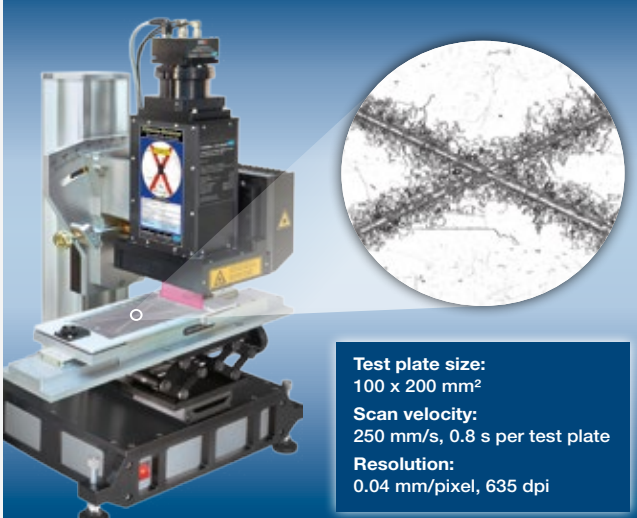

One example of successful optomechanics, e.g. in the field of fiber optics, is the laser beam coupler 60SMS, which is used to couple into polarization-maintaining fibers. This demanding task requires very high precision and quality in order to reach long-term stability and high coupling efficiencies. The SK010PA polarization analyzer is the optimum tool for aligning to the polarization-axis of the fibers in a very precise and fast way. Further fiber optics components are available

for the wavelength range 360-2100 nm.

Another field using successful optomechanics is Machine Vision that uses two product lines, laser line or spot generators as well as line scan cameras. Ruggedized solutions for industrial purposes are only possible by using high-quality optics, mechanics and electronics, e.g. for complete line scan camera based scanner systems. The Corrosion Inspector, as an example, is an automated and objective analysis tool for corrosion phenomena that offers a fast and precise evaluation according to international standards. The line scan cameras used (monochrome or color) are also supplied as OEM components for worldwide use. They are offered with different Interfaces including USB3.0 or GigE.

The motor of the company is its extensive know-how and its highly qualified and strongly committed employees. To have sales, research and development so closely knit together ensures a quick and efficient response to customer needs. Since October 2016 the company is owned by the Gregor Federau foundation which is dedicated to child and youth welfare.

**Corrosion Inspector**

## About AutoVimation

AutoVimation produces protective camera enclosures and a wide range of accessories that allows to use machine vision systems in almost any environment. Thanks to the patented camera mount the enclosure works like a heat-sink and can so be used in higher ambient temperatures. Water or Peltier cooling systems are available in order to extend the temperature range further. The „Machine-Vision Construction Kit“ makes it easy to integrate cameras, lights and other components into a machine – using pre-fabricated parts, avoiding

design time and allowing simpler adjustment to the application. New is the stainless steel enclosure series plus mounting system in hygienic design with IP69K protection.

## About Chromasens

### Machine Vision 'Made in Germany'

Chromasens develops and produces both standardized machine vision components – such as color line scan cameras, spectral cameras, 3D stereo cameras and line scan lights – and custom-specific image pro-

cessing solutions. Chromasens employees have comprehensive expertise in development, project management, application creation, system integration and professional services. The company's know-how is further enhanced through continuous dialogue with universities and research centers. The intensive cooperation with the customer in the form of comprehensive support throughout every project phase is a cornerstone of the company philosophy. Development and manufacturing takes place at the company's facility in Constance. In May 2017 Chromasens has joined the Lakesight Technologies group.

## About Edmund Optics

Edmund Optics, leading supplier of optics, imaging, and photonics technology with manufacturing sites in the US, Asia and Europe as well as global sales offices, holds with a portfolio of about 30.000 products the world's largest inventory of optical components for immediate delivery. Building up great competency in imaging and imaging components, EO provides

complete imaging solutions with a large product line, technical expertise, manufacturing capabilities, extensive technical support, and assists customers in every way possible to maximize the performance of their imaging system. From stock items in the catalog to custom imaging lenses, from prototype to high volume: "EO - Your Imaging Solutions Provider."

## About Fujifilm Optical Devices

### Fujinon Lenses from Fujifilm

Tapping into optical technologies and precision processing and assembling technologies nurtured over many years, Fujifilm offers a wide variety of Fujinon lenses. The Fujinon brand is world-renowned for its innovative and reliable products in the field of broadcast & cine lenses, binoculars, CCTV lenses, machine vision applications as well as for special custom made optical products, for example those used in digital projectors, automobiles and in many other applications.

CCTV and Machine Vision lenses: The extensive product range of Fujinon CCTV and

Machine Vision lenses features the appropriate solution for almost every application. The Japanese manufacturer offers a continuously growing product range of high resolution megapixel Zoom and Varifocal lenses for security applications in HD quality. Lenses for Machine Vision are precise optics with minimized distortion for optimal image quality – even in harsh environments. Special lenses round off the wide product range, like infrared-coated lenses for Day&Night, lenses for 3CCD cameras or high resolution 185° Fish Eye lenses. You no longer miss anything with Fujinon lenses.

## About the JAI Group

JAI is a global manufacturer of digital cameras for machine vision, traffic imaging, surveillance, life science and scientific research.

Besides a broad range of leading-edge 1-CCD and 1-CMOS progressive area scan and line scan cameras, JAI is a leading provider of multi-imager cameras incorporating advanced prism-block technology, including 3-CCD/3-CMOS RGB area scan cameras, 2-CCD multi-spectral/HDR cameras plus a complete family of 3-CMOS/4-CCD/4-CMOS line scan cameras. JAI's product program includes cameras for visible, UV, NIR and SWIR im-

aging with GigE Vision, Camera Link, USB 3.0 Vision and CoaX-Press interfaces.

## About Matrix Vision

Matrix Vision is a leading manufacturer and offers a large spectrum of digital cameras – from USB, GigE with Power over Ethernet to smart cameras with integrated easy configurable machine vision software. A wide range of USB 3.0 cameras with CMOS sensors up to 12 megapixels are provided with the USB3 Vision Standard. Matrix Vision introduced a new, revolutionary 6D perception camera. It detects objects in space by means of motion, depth information and experience. The perception camera is ideal for palletizing, de-palletizing and pick & place applications in logistic, packaging and

automotive sectors. Besides an extensive range of standard products we offer custom solutions, which provide maximum utility for users as a result of continuous development. Join our vision world and benefit from cutting-edge technologies and extensive services.

## About Micro-Epsilon

Micro-Epsilon is a medium-sized family-run company which plays a leading role in measurement technology. For more than 45 years we have continuously offered reliable, high performance, unique solutions particularly when high precision measurement or inspection is required. Our product range covers sensors for the measurement of distance and displacement, sensors for IR temperature measurement and color detection, as well as systems for dimensional measurement and defect detection.

Innovative products that provide the highest level of precision are created through intensive research and development processes, unique know-how and a broad network of collaborative operations.

## About Optics Balzers

Optics Balzers is the innovative and independent industry partner for the development and production of coated optical components and subassemblies. The company possesses a broad and in-depth know-how in optical thin-film coating processes, complemented by sophisticated patterning, glass bonding and sealing, and further processing capabilities necessary for producing optical thin-film coated components up to optical subassemblies.

Highly experienced and skilled development and engi-

neering teams closely collaborate with customers to develop innovative solutions meeting their requirements and design robust processes to manufacture the customer specific components. The combination of these capabilities and skills places Optics Balzers at the forefront of markets in the photonics industry such as Automotive, Biophotonics, Laser, Space & Defence, Lighting & Projection, Sensors & Imaging, and Industrial Applications.

## About Opto

Opto delivers integrated imaging modules that consist of optic, light, camera and intelligence for integrators, product manufacturers and machine builder in the domains of medtech and industry. Opto is a globally recognised solution provider, able to support customers from around the globe.

Together with our subsidiaries AllianceVision and RobSwiss we extend our optics know how with imaging and automation skills on a solution level for high precision demands in photonics and machine vision applica-

tions. Through its deep application knowledge, Opto provides its clients with special optomechanical solutions that are reduced to the essentials of the application and perfectly cost optimised.

## About Qioptiq Photonics

Qioptiq, an Excelitas Technologies Company since 2013, is a photonics technology leader focused on delivering innovative, market-driven solutions to meet the high-performance lighting, detection and optical technology needs of today's global markets. We are committed to enabling our customers' success in applications across the fields of biotechnology, consumer products, defense & aerospace, medicine, scientific discovery, safety & security, automotive, energy & environment, semiconductor and industrial manufacturing. Through the acquisition by Excelitas, Qioptiq is now part of a network of 19 state-

of-the-art photonics technology centers staffed with more than 5,500 photonics professionals across North America, Europe and Asia.

## About Ricoh International

On 1st April 2017, Ricoh (formerly Pentax) moved from Ricoh Imaging Europe S.A.S in Hamburg to Ricoh International B.V. - German Branch in Düsseldorf.

Ricoh International has 60 years of experience in the manufacture of CCTV lenses (including machine vision). Ricoh's goal is to always offer their ma-

chine vision customers the best lens with which to meet the technical constraints of an application. The focus during the development of our lenses is on quality, performance, durability and longevity. Therefore, since 1st November 2017 all Ricoh lenses come with a three year warranty.

## About SVS-Vistek

As a producer of cameras for industrial machine vision, SVS-Vistek GmbH has been synonymous with innovation and precision for over 30 years. The SVCam-series cameras are used wherever a precise view is required for materials handling or assembly technology, logistics, traffic monitoring or quality assurance.

Known all over the world for its industrial cameras, the mid-size company develops and produces exclusively in Seefeld near Munich, Germany.

It provides specially customized solutions for system integrators and OEM customers.

With the broad expertise of its own specialists and the experience which it has gained as a pioneer of numerous technical developments, SVS-Vistek advises customers on the selection and combination of the appropriate elements, additionally offering custom-made cameras and machine vision components.

## About Vision Components

Vision Components GmbH is a leading supplier in the field of machine vision and develops and distributes intelligent, network-compatible real-time Smart Cameras which are able to operate without a PC. These embedded vision solutions can be easily integrated into almost any application. Customers can choose between models with ARM processors with freely programmable FPGA and VC Linux OS or DSP-based models with the proprietary VCRT OS. The prod-

uct portfolio includes Smart Cameras with/without protective housing, single board cameras, vision sensors. Providing custom-tailored OEM solutions for all kinds of applications are the core of the more than 20 years experience in machine vision and imaging.

## About Ximea

For 25 years Ximea has developed and manufactured leading-edge, high-performance standard or OEM cameras with main distinction based on the highly optimized and extremely robust way the imaging solutions are built (USB 3.1 series) while still providing fastest speed like PCIe camera line.

Our cameras flexible platform designs include an application programming interface (API) for many common Vision libraries and Operating Systems like Windows, macOS and Linux (ARM) as well as compliance with standards like USB3 Vision.

Drawing on decades of experience in the industry, Ximea's offer consists of state-of-the-art cameras with USB3, PCI Express, Thunderbolt and Fire-Wire interface as well as X-Ray or Hyperspectral imaging technologies.

To ensure the highest quality at the best price, Ximea owns and operates its agile RnD and production facilities. This allows to design your solution with only the best components and shortest lead times. Customers can further leverage Ximea's extensive engineering services.

Adlink Technology provides a wide range of embedded computing products and services to the test & measurement, automation & process control, gaming, communications, medical, network security, and transportation industries. Adlink products include ETX and COM Express modules for industrial computing, advancedTCA, CompactPCI, PCI Express-based data acquisition and I/O and vision and motion control. Adlink provides customization and system integration services, and maintains low manufacturing costs.

Founded in 1983, Advantech is a leader in providing trusted, innovative products, services, and solutions. Advantech offers comprehensive system integration, hardware, software, customer-centric design services, embedded systems, automation products, and global logistics support. We cooperate closely with our partners to help provide complete solutions for a wide array of applications across a diverse range of industries. Our mission is to enable an intelligent planet with Automation and Embedded Computing products and solutions that empower the development of smarter working and living.

For 25 years, Allied Vision Technologies has been helping people see the bigger picture. Allied Vision's camera portfolio is one of the largest in the market and offers a camera for nearly any application. If no standard product fits, the Allied Vision Modular Concept creates additional flexibility providing hardware option combinations that are almost endless. Allied Vision cameras are easy to integrate into any machine vision system thanks to our Software Development Kit (SDK) that is compatible with all common operating systems, camera interfaces and image-processing libraries.

The Baumer Group is one of the world-wide leading manufacturers of sensors, encoders, measuring instruments and components for automated image-processing. With around 2,400 employees and 38 subsidiaries in 19 countries, the family-owned group of companies is always close to the customer. We offer a unique range of products, from industrial cameras and vision sensors to image processing components, for many different applications across varied industries. The location in Germany accommodates R&D and production under one roof which ensures our high product quality standards.

Zeiss ZF lenses for industrial applications are key components in complex production processes as well as in measuring tasks, quality assurance and many other applications. The infrared lenses of the ZF series are suitable for the use with special cameras like IR cameras without an IR blocking filter. The transmission of ZF-IR lenses adds up to 70% at 1000 nm, while usual lenses exhibit only 20%. Zeiss Visionmes lenses are developed for crucial measuring tasks in industry and feature telecentric optics. For optical metrology at high precision telecentric optics are essential.

Cognex Corporation designs, develops, manufactures, and markets machine vision sensors and systems. Cognex vision sensors are used in factories around the world to automate the manufacture of a wide range of items and to assure their quality. Cognex is the world's leader in the machine vision industry, having shipped more than 450,000 machine vision systems, since the company's founding in 1981. In addition to its corporate headquarters in Natick, Massachusetts, Cognex also has regional offices and distributors located throughout North America, Japan, Europe, Asia, and Latin America.

Compar industrial machine vision systems are the solution wherever quality control is required, zero-defects strategies are applied, or value for money and high productivity are needed. The main functions are inspection, identification, and robot guidance. Customers in all industries – however, especially in the automotive, watch-making, packaging, printing, electronics, medical and pharmaceutical sector – appreciate our innovative package solutions based on a modular system. Aspiring to be your competent system provider for machine vision and robotics, we offer solutions that include smart cameras, computer-based vision systems, accurate robots, and even integrated test installations that allow for highly flexible handling.

Confovis is a system provider of optical 3D measuring systems for industrial use. In business since 2009, the company has focused on producing customer-oriented, applicationspecific solutions. Its patented technology of structured lighting – based on confocal measuring technology – gives rise to new options for quick and nanometre-precise surface analysis for industrial applications. With the latest generation of devices, Confovis combines confocal measuring technology and focus variation into a single system. The measuring technology specialist thus offers industrial clients in the automotive & aerospace sectors, toolmaking & mechanical engineering, metallurgy, semiconductor and optical industries a time- and cost-saving solution for a wide variety of measuring tasks such as micro-contour and roughness measurement.

Lumimax LED lights by iiM AG are especially designed and developed for use in industrial Machine Vision applications. The high-performance lighting products with integrated controller technology for continuous, switch or flashing operation guarantee the utmost functionality and enable the stable, extraneous light-independent illumination of your test objects – even for extremely fast processes. Additional components such as mounting solutions for different cameras, diffusers, fresnel lenses and polarization filters are also available. The team of iiM AG has extensive experience in Machine Vision and can apply this knowledge excellently when designing and realising its products and when providing consulting.

Since 2012, inos is a member of the internationally positioned Grenzebach Group.

By means of our sensors and systems the robots become clear-sighted - we migrate the scientific knowledge from laboratory to solid and industrial-grade systems.

The intensive cooperation with the OEM, their equipment and cell manufacturers pushes innovation. Together with our partners we develop solutions to create production-appropriate, operational and highly available automation systems.

## Solution Provider

Opto develops and manufactures customized, optoelectronic modules, optical components and systems for the industrial and biomedical markets. With its own facilities in Germany, France, the UK and Asia, Opto is a globally recognised solution provider, able to support customers from around the globe. Through its deep application knowledge, Opto provides its clients with special optomechanical solutions that are reduced to the essentials of the application and perfectly cost optimised.

## Producer

In 1987, PCO AG was founded with the objective to develop and to produce specialized fast and sensitive video camera systems, mainly for scientific applications. Meanwhile the product range of PCO cameras covers digital camera systems with high dynamic range, high resolution, high speed and low noise, which are sold in the scientific and industrial market all over the world. Currently PCO is one of the leading manufacturers of scientific cameras. The actual wide range of specialized camera systems is the result of technical challenge and product specific know-how.

**Producer**

We are proud to announce the new super compact M112FM series: The lenses have been developed for cameras with large 1/1.2" imagers, like the IMX174/IMX249. They deliver cutting edge optical performance with no vignetting and reach a 3.45 micrometer pixel pitch resolution for imagers like IMX250/IMX264.

All this in a super small body of just 29 mm diameter.

As a technology leader, our company develops, produces and sells an optimally attuned modular system worldwide. It ranges from complex image processing systems to individual high performance LED lighting and precision optics. To master challenging image processing tasks that would overtax standard components, we offer our customers tailor-made image capturing and processing solutions. Leading OEMs and system integrators have banked on state-of-the-art design by Vision & Control for almost 20 years.

Vision Engineering is a global leading-edge manufacturer of unique ergonomic stereo microscopes and non-contact measuring systems. Since its formation in 1958, Vision Engineering has become one of the world's most innovative and dynamic microscope manufacturers, with a global distribution network. The product range includes solutions for almost every inspection and measurement application. Choose unparalleled clarity and precision. Innovative and superior ergonomic designs lead to performance and productivity gains. Quality is the goal! For us and our customers as well. That's the reason why we present to our customer worldwide successful products. The eyepiece-less technology which is implemented in our systems allows a nearly fatigue-free operation with the microscope. More comfort is not possible.

## Producer, Solution Provider

Since 1984 machine vision specialist Vitronic in Wiesbaden, Germany aims to contribute to the success of its customers. From qualitative surface inspections to three-dimensional weld seam inspections and 3D Robot Vision, the specialist Vitronic assists in optimizing production processes. All inspection solutions are individually tailored to the customers' needs. Hardware and software naturally originate from one source, the highest service quality is ensured. Vitronic is active in various industries, among them automotive, medical and pharmaceuticals, packaging and photovoltaics. Due to its pioneering efforts and permanent investments in research and development, Vitronic is one of the leading machine vision companies worldwide.

WIR electronic manufactures standard cables, individual customized cable assemblies up to wire harnesses for high-performance solutions in imaging/vision, robotics and industrial automation industries. We provide high quality cables for CameraLink, GigE Vision, USBVision 3.0 as well as overmouldings (e.g. RJ45 straight/angled/screwable; M12 A-, B-, D-, T- and X-coded) in many colors and for cable dia. up to 9 mm.

From engineering, prototyping up to mass production – everything from one source.  
product range:  
data cables | single conductors | ribbon cables | harnesses | coaxial cables | FO | power cables | rag chain | control line | bus cables (CAN, EtherCat,

Profibus, Profinet) | panel equipping | cabinets and others | oversized, ultra-short and cleaned cables | additive manufacturing

Z-Laser is known as a reliable partner for the machine vision industry with extensive knowledge of more than 30 years in laser production.

Our new ZX lasers are based on a fully automated production process that guarantees highest levels of precision and reproducibility. Numerous optical configurations, different module dimensions, and the stainless-steel housing (IP67) are key to a smooth integration in any machine vision system.

The Z-Fiber series is the high-end choice wherever an exceptional beam performance (micro lines) for high-resolution measurements is required.

High power applications are covered by the ZQ1 series. The industrially

suited performance and design make this product the perfect solution for machine vision, or road and rail inspection (certified DIN EN 61373:2011-04)

BitFlow has been developing industrial frame grabbers & software for the imaging industry since 1993. We specialize in interfacing to cameras with very high data/frame rates; working in environments with complex triggering and I/O requirements; and running in applications where every CPU cycle is precious. Our primary interfaces are Camera Link & CXP. Our software is some of the easiest to use, yet incredibly powerful and reliable. We are confident that we can solve your imaging challenges.

# StreamPix 7 DVR Software

High Speed Video Recording

- StreamPix is compatible with all machine vision cameras including USB3, GigE Vision, 10GigE, Camera Link and CoaXPress.
- Record from multiple cameras in sync with audio, DAQ data, GPS and IrigB.
- Capture in multiple formats including uncompressed, MOV, AVI, JPEG and H264. Supports a wide selection of codecs.
- Capture up to 6GigaBytes/second.
- Turnkey solution available.
- Now with German GUI.

## North America

### Producer

Spectrum Illumination is the leading supplier of high output LED lighting for the Machine Vision Industry. Spectrum Illumination was the first company to bring high output LEDs to the market and we are still the only company with a full product line utilizing that technology. Since we began in 1999, our focus has been on quality products at a reasonable price. Today, we have nearly 150 standard products with thousands of variations available to meet your specific needs. Most standard products are available to ship within days of receiving a purchase order. Please contact us today and find out more about our product line including our newest Dome Light, the DL180, available in 1-4 channel/color options. Try one today for 30-days risk free and see why our Monster Series lights are the best in the business.

OPT was founded in 2005 and has been continuously expanding its position as one of the leading enterprises in industrial machine vision. We have developed a vast variety of unique innovative solution for system integrators, equipment manufacturers, as well as for large manufacturers and enterprises ranking in the top 10 of Fortune 500. Our focus is on machine vision lights, lenses, vision systems and other components.

Today, OPT is an enterprise with more than 400 employees. Among them, 28 engineers are working on Lighting R&D, 42 software programmers contribute to our vision systems development, 96 application engineers provide support, more than 58 engineers are assigned to vision components application design, and more than 78 sales engineers are happy to provide top-level customer care.

## High Resolution 9 Megapixel Lenses for 1.1" Format Cameras with 3 Year Warranty

Ricoh is proud to introduce a new three year warranty across its entire range of FL Series Lenses including its flagship 9MP range.

With focal lengths from 12 to 75 mm and suitable for cameras with 1.1" Sensors, the 9MP lenses produce sharp, high resolution 135 lp/mm, high contrast, images from the center to the periphery, making them ideal for inspecting high density printed circuit boards, confirming hairline cracks and surface defects.

The lenses feature a compact  $\phi 42$  mm design, despite their 9 MP resolution and  $3.69 \mu\text{m}$  pixel pitch compatibility, allowing a high degree of freedom incorporating them into a wide range of equipment and places.

The 'floating' focusing mechanism allows the capture of low-distortion images at all ranges, from infinity right down to 8cm for the 12 and 16 mm lenses, demonstrating maximum performance at any magnification.

**3 year warranty since  
1st November 2017**

## Up to 20 Times Faster Image Processing with FPGA

Having built up extensive knowledge on FPGA programming, Vision Components has achieved up to 20 times faster performance in various projects. These results are enabled by the versatile system on chip (SoC) architecture in VC Z series embedded vision systems: the cameras feature a Xilinx Zynq SoC that comprises an 866 MHz dual-core ARM processor and an FPGA, which can carry out image processing tasks in parallel. Using Xilinx' Vivado HLS tool, Vision Components programs the integrated circuit in C and C++, and can furthermore draw on its own extensive software library. Software-based FPGA programming has huge advantages. Users can test all programmed functions in advance in a simulation environment and debug the script, if necessary. This greatly simplifies troubleshooting and significantly reduces development time. FPGA programming therefore promises to be-

come much more accessible to machine vision developers in future. Vision Components offers support and feasibility studies to explore the potential of FPGA programming.

## Fastest Camera Interface, Smallest Cameras

### PCIe based high speed cameras:

These cameras use fast and high resolution CMOS sensors and stream images with up to 64 GBit/s to the host computer. Now available are models like CB500 with 48 Mpix@30 fps and CB013 with 1.1 Mpix @3500 fps.

**USB3 Vision camera series:** With this line of extraordinary small, lightweight, fast, efficient and highly customizable cameras, Ximea offers a unique value and performance for the industrial market. The perfect fit for embedded systems integrators.

**Hyperspectral imaging cameras:** Smallest and most lightweight among HSI solutions, USB3 based hyperspectral cameras with 16 up to 150+ spectral bands in the visible light and near infrared. Ideal for UAV and mobile applications.

**Subminiature USB cameras:** World's smallest industrial cameras with a size of only  $15 \times 15 \text{ mm}^2$  offers 5 Mpix resolution in tight spaces.

**Scientific grade cameras:** For the most demanding applications that require the ultimate image quality. With high resolutions at 14+bits, Cooling, low noise and high Dynamic range. Models with CCD, sCMOS, X-Ray and Backside illumination.

are accepted six weeks before end of year.

Specially identified contributions are the  
responsibility of the author. Manuscripts  
should be addressed to the editorial of-  
fice. We assume no liability for unsolicited,  
submitted manuscripts. Reproduction,  
including excerpts, is permitted only with  
the permission of the editorial office and  
with citation of the source.

The publishing house is granted the  
exclusive right, with regard to space, time  
and content to use the works/editorial  
contributions in unchanged or edited form  
for any and all purposes any number of  
times itself, or to transfer the rights for  
the use of other organizations in which it  
holds partnership interests, as well as to

third parties. This right of use relates to  
print as well as electronic media, includ-  
ing the Internet, as well as databases/  
data carriers of any kind.

Material in advertisements and promo-  
tional features may be considered to  
represent the views of the advertisers  
and promoters.

All names, designations or signs in this  
issue, whether referred to and/or shown,  
could be trade names of the respective  
owner.

# THE OF VISION TECHNOLOGY

Machine vision: key technology for automated production. Experience how robots react flexibly to their environment. Meet industry visionaries and innovators, discuss important topics such as embedded vision, and discover the path that non-industrial machine vision is taking. At VISION, the world's leading trade fair for machine vision.

**06 – 08 November 2018**  
**Messe Stuttgart, Germany**
