INTRODUCING THE SWEETEST ACE **EVER.**

WE KEEP PILING ON PERFORMANCE, NOT PRICE.

Now you can own the most powerful camera in the Basler ace series for about half the cost of comparable performance cameras. Featuring cutting edge CMOS sensors from Sony and ON Semiconductor and the most modern global shutter technology, these revolutionary cameras offer frame rates up to 750 fps and deliver up to 5MP resolution. They make leveraging the full bandwidth of GigE or USB 3.0 easy. What's more, new firmware features like a perfect color mode and de-noising lead to image quality that surpasses the sensors' already exceptional performance. Learn more at baslerweb.com/new-ace.

the power of sight

Europe 2016

From the point of view of the companies which are advancing the use of industrial image processing and the development of new systems and solutions, a review of the year 2015 will certainly be positive. This perception is reinforced by the figures and statistics from various associations.

Vision technologies and automated measuring systems are becoming

essential factors for the success of the fourth industrial revolution in the production industry. The fact that „Industry 4.0“ or the „Industrial Internet of Things“ depend on further progress in these key areas will not change in 2016.

The creativity, knowledge and skills of scientists, engineers and technicians flourish wherever there is freedom of thought and international cooperation and where economic and technological goals can be aimed for and achieved in an atmosphere of mutual trust. Europe was, and remains a region of the world which can provide all of these conditions.

However, at the end of 2015 and the start of 2016 Europe is in an exceptional situation which demands statements of standpoints and orientation to the values which ensure peaceful and successful further development.

It remains to be seen whether it will be sufficient to counteract the growth of ignorance, intolerance and increasing nationalism with a pragmatic attitude of „business as usual“. However, there is no doubt that calm and reasoned action is a good basis for the continuation of the success of previous years in 2016. Reporting on the successful use of the latest technology makes the work of the specialist media both interesting and exciting.

More than ever, there is a need for reliable scenarios for the future and the think tanks of the academic „oracles“ are endeavouring to satisfy this need. At this point in time, the continuation of the success story of vision technologies and measuring and inspection technology is easily foreseeable and should be a good reason to look forward to 2016.

If you are looking for collaborators in this success story, you can find them in our international Buyers Guide 2016. You can make good use of this to create new and successful solutions in your field.

Machine Vision and Optical Metrology in Europe

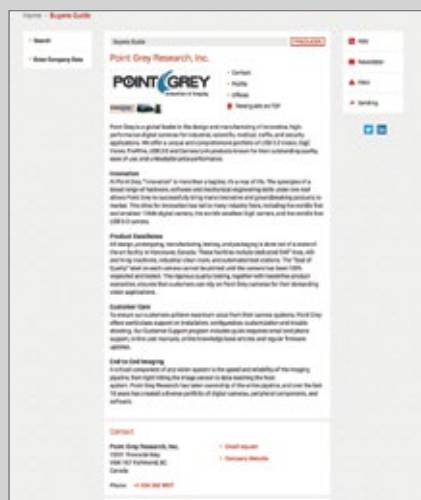

The inspect Buyers Guide 2016

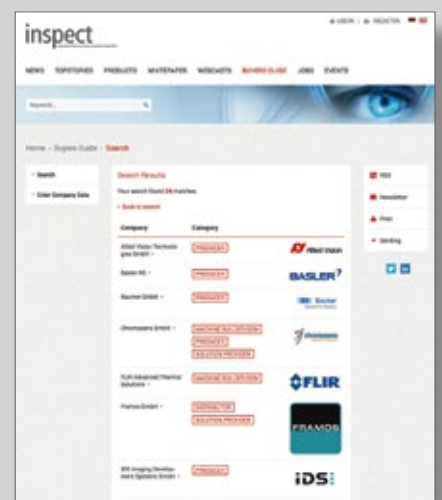

Throughout the year, we aim to provide you with information about new developments, technological trends, groundbreaking applications, new products and leading companies. Throughout the year, we are faced with the recurring challenge: What to select, what to highlight, what to point out. There is never enough room to cover it all. So once a year we seize the opportunity to present to you a comprehensive overview of the machine vision and optical metrology industries.

The Online Buyers Guide provides sophisticated search functions for all listed companies.

Companies providing a full-fledged company profile will be additionally found in multiple categories with the keyword search.

The full text search for "camera" yields 24 results: every company having used the word "camera" in their description is listed.

The inspect Buyers Guide is published in its eighth year now, for the seventh time it also serves as the official Buyers Guide of the EMVA, the European Machine Vision Association. The guide contains information about more than 450 companies from over 30 countries. The inspect Buyers Guide has a clear focus on companies doing business in Europe or exporting their goods to Europe. Naturally this comprehends companies and organizations from all over the world.

Online ...

The inspect Buyers Guide is a true cross-media product. At www.inspect-online.com/buyers-guide the online database provides sophisticated search functions for all listed companies. Every entry can be searched for with full-text search, and every listed company will be found here based on the individual company description. Additionally, every listed company will be found by name, company category (e.g. producer, integrator, research facility, association, etc.) and country of headquarters.

Companies wanting to provide more information and aiming at even better search results are listed with a company profile, including detailed company data and a listing of products offered, industries served and applications catered to. These, and only these, companies will be found in the respective search categories.

The online Buyers Guide is open for companies within the scope of the inspect all year round. In this way it is always up-to-date.

... and Print

The availability of data online is a clear benefit when presented with clever search functions. However, sometimes you do not want to bother going online, or you don't want to search specifically but rather obtain a quick overview. In these instances a printed version has its unchallenged advantages. Not to mention the ease-of-use when taking notes right next to the provided data. Thus, once a year the inspect Buyers Guide printed edition is provided to you. With this guide we aim to give you a full overview that is still easy-to-use, a complete set of information that is still not too sub-divided into too many categories.

The inspect Buyers Guide 2016 is divided into three main chapters: Topics, company profiles for the main global regions, and company listings for the main product categories. In an industry as innovative and dynamic as ours it will most likely never be possible to provide an overview that is final and complete, but we do our best to come as close as possible.

Solid Market Growth for the European Machine Vision Industry

EMVA Looks Ahead to A Busy Year with New Partnerships

2015 has been a very successful year for the European machine vision industry. Demand for vision technology from Europe was strong throughout the year regardless of another peak in the Euro crisis with Greece coming close to sovereign default in June and first clouds on the economic horizon in China later in the year.

After having surveyed the first three quarters of the year the EMVA Quarterly Sales Report indicates that the European machine vision market will close the calendar year with a total growth of 10% (+/-1%) compared to the previous year; and all indicators point towards a continuation of this positive trend into 2016.

Despite the fiscal turmoil Greece has proved to be a wonderful host for the machine vision community during the EMVA Business Conference in Athens which took

place only shortly before things got slightly out of hand in July. Some 110 participants from 18 countries attended the event and once more enjoyed high level speeches addressing topics in the areas of management, technology, innovation, markets and marketing as well as the outstanding networking opportunities. Looking ahead towards the 14th EMVA Business Conference next year in Edinburgh/Scotland preparations are already under way. Registration is already open for the conference which will take place June 9 through 11, 2016, in the Radis-

son Blue Hotel, Edinburgh with its 16th-century style façade.

In the field of market research EMVA has again provided in-depth market research as well as up-to-date data for management decisions. The quarterly market data survey which is made available to all contributing companies gives a regular update on the economic development with input right out of the industry. In addition, stakeholders inside and outside the vision industry confirm the attractiveness of the most recent country report "Machine Vision in Italy" which again

maps a key market in Europe for the machine vision industry. Amongst a detailed market analysis the report contains a comprehensive list of enterprises and public institutions in Italy active in the diverse fields of machine vision. While EMVA

“European machine vision market will close the calendar year with a total growth of 10%.”

members receive the country reports free of charge non-members may obtain the study from the EMVA head office. The next country report is already scheduled for 2016 and will provide detailed information about yet another key market in Europe.

EMVA has further increased its efforts during 2015 to strengthen cooperation with various trade show organizers. For the first time the Control – International trade fair for quality assurance in Stuttgart - partnered with EMVA and invited General Secretary Thomas Lübckemeier to speak at the opening press conference of the show. For 2016, the 30th edition of Control, an extended cooperation is in preparation which will include an all-new machine vision forum on the show ground hosted and organized by the EMVA.

Cooperation is also under way for next years' edition of the SPS IPC Drives Italia in Parma, surely a key Italian trade show for the automation industry. Here the EMVA and Messe Frankfurt Italia started preparations of a networking reception specifically targeting the Italian machine vision community.

Last but not least, after two years Stuttgart will once again

become the epicenter of the machine vision world in November next year and the EMVA will be proud to be again the host of the vision community at the International Vision Night on the eve of Vision 2016.

Besides all operative activities promoting the machine vision industry on an international level the EMVA is very aware of the strategic topics for the industry. The technological advances in the field of embedded systems will affect

the vision world not only in the non-industrial field but also in the traditional industrial vision applications; and the positioning of machine vision within the wide Industry 4.0 or Internet-of-Things concepts are seen as tasks for the very near future. The EMVA Board of Directors is already actively discussing these topics with main players inside and outside of our industry. The EMVA invites members and non-members to actively participate in this process.

USB Type C plug and socket

A New Generation

What Does USB 3.1 Have to Offer for Industrial Imaging?

The new interface standard USB 3.1 is currently taking over the world of consumer electronics and IT. It offers data rates of 10 Gbit/s and power transfer of 100 Watt. Does this open up new possibilities for low-cost image processing systems with high resolutions, high image rates and new wiring concepts? The answer is very promising, however several challenges have not yet been resolved...

Since this year's Consumer Electronics Show in Las Vegas, everyone is talking about USB 3.1. Even Apple, the only computer manufacturer which has retained the competing Thunderbolt standard for many years, is now changing over to USB 3.1. Thanks to the large bandwidth, external hard drives are just as fast as internal drives via SATA III. USB 3.1 ports can charge notebooks and simultaneously act as network interface display ports and power supply screens. This results in completely new interface and wiring concepts. Even completely new types of products are possible, such as battery packs – acting as “portable power sockets” which can charge

the batteries of several devices simultaneously and also serve as USB hub.

From USB 2.0 and FireWire up to Gigabit Ethernet and USB 3.0 - over the past 15 years industrial imaging has always followed the trends in computer technology, as this reduces the costs for PC interfaces, chip sets and the development of drivers. However, innovation cycles are becoming shorter. At the Vision 2014, almost all manufacturers had USB 3.0 cameras ready for series production and now there is already a new version of the standard.

New Sensors Need Bandwidth

However, USB 3.1 also opens up new possibilities for Machine Vision. The new Sony Pregius CMOS sensors with Global Shutter Technology, 5 megapixels and 145 frames per second require a bandwidth of at least 7.25 Gbps to utilize their full performance with 10 Bit per pixel. Also the 5.3 megapixel sensor from the OnSemi Python family cannot achieve its maximum of 100 fps on a USB 3.0 platform. This can also not be achieved by the Cmosis CMV sensors, which are on the market for a while already. Due to the bandwidth, camera manufacturers and users must use Camera Link, 10 Gigabit Ethernet or CoaXPress for critical real-time applications. However, before becoming euphoric, it is worth taking a look at the specifications of the new standard.

It Depends on the Generation

USB 3.1 comes in different flavours, mainly by means of two generations, referred to as

Gen1 and Gen2. In principle, Gen1 is just another name for USB 3.0. The protocol and the data rate have not been changed. Most of the USB 3.1 devices which are available on the market use Gen1 and cannot exceed the theoretical 5 Gbps of USB 3.0. Still USB 3.1 Gen1 brings several great improvements, as it allows an increased power transfer and the use of more user-friendly plug connectors. It is only USB 3.1 Gen2 which offers the often cited 10 Gbps or an effective bandwidth of 800 MB/s. With this, it is more than twice as fast as Gen1 or USB 3.0 with an effective rate of only 350 MB/s. What is more impressive than double the bandwidth is the increased power transfer according to the new USB Power Delivery 2.0 specification. With this, USB 3.1 ports will be able to supply up to 5 ampere at 20 volts (100 Watts). This alone creates great technical challenges for electronics, plug connector and cable manufacturers due to the large bandwidth and the compact design.

An End to “Which Is the Right Way Round”?

You likely know precisely where to find the USB port on your notebook, tablet or smartphone. In spite of this, how many attempts do you need to plug in a USB stick, a mouse or a charging cable without taking a careful look? After more than 17 years, the USB Implementers Forum (USB-IF) has given in and at least with regard to the plug design waived the backward compatibility for so-called Type A (host side) and Type B (peripheral side) plug connectors: With the new USB Type C (see photo) there is no longer any top

About the author: With his business consultancy and marketing agency Vision Markets, **Dr. Ronald Müller** helps small and medium sized companies to utilize the opportunities of the global growth markets of imaging and photonics.

and bottom or a difference between the host and the peripherals. This means that a USB 3.1 cable with Type C plug connectors can be plugged in on either side and the plug connector fits in the socket, no matter which way round it is inserted.

USB 3.1 @ Machine Vision

The need for greater bandwidth is driven by applications in which moving objects have to be recorded with the greatest possible resolution with regard to time and space, like for the inspection of semiconductor products and surfaces, three-dimensional measurement of foods, sorting of waste, tracking of particles in wind and flow tunnels, analysis of sporting events and many more. Cameras with fast sensors, high resolution and a high-performance data interface allow simpler and more cost-effective system designs if several lower resolution cameras are replaced with a single high-resolution camera. This may also mean an increase in the frame recording rate and the resolution in the automation of production, so that production systems can be operated faster and even smaller defects can be precisely detected. Here, USB 3.1 Gen 2 with its effective 800 MB/s promises new, economical possibilities. In spite of this, real-time characteristics will – as previously – be generally restricted and will depend heavily on the implementation of the software driver and the operating system. It may take some time before cameras with USB 3.1 Gen2 make it to the market. Although some innovative camera manufacturers may already be very close to an implementation of USB 3.1 Gen2, the majority of manufacturers are waiting for the chip sets from Cypress & Co. and this, as with USB 3.0 – will take some time. Because of this, the market launch of most of the products with USB 3.1 Gen2 can probably be expected towards the end of 2017.

USB Type C Is Coming

This will probably occur considerably more simply and faster in the case of USB Gen1 cameras with USB Type C plug connectors. Now that the major market players Asus and MSI are aggressively marketing motherboards with USB 3.1 and 10 Gbps, it can be assumed that USB 3.1 with Type C plug connectors will become the standard in new PCs in the coming year. However, camera customers do not need to be worried: All USB 2.0/3.0 cameras with USB Type B or MicroB sockets will also function on the new ports, if they have the corresponding cable or adapter. The USB Type C plug connector which can be inserted any way round will probably not offer many advantages to system manufacturers who build an industrial camera and then connect and permanently fasten the plug. At least the USB Type C plug connector with a width of 8.25 mm

USB 3.1 comes in different flavours: Gen1 and Gen2.

is almost 33% narrower than the USB 3.0 MicroB, therefore needs less space on the camera PCB and allows for even more compact designs. According to our latest survey, leading machine vision cable manufacturers expect that the maximum length of passive cables will also remain unchanged for USB 3.1 Gen1 with Type C plug connectors. Up to now, nobody has dared to make a forecast for the maximum cable length of USB 3.1 Gen2. At present, the USB-IF is considering the fastening for Type C plug connectors. Traditional screw fastening or clips are being discussed. The latter would make production easier, especially for camera manufacturers, due to the greater mechanical tolerances. Now that USB Power Delivery 2.0 enables the transmission of up to 20 volt and 5 ampere, new options result for the wiring of cameras, flash control and lighting. With only a single cable between the PC and the camera and another cable between the camera and the flash controller, both devices could be supplied with power, controlled and read out. For this, close cooperation between camera and flash control manufacturers would be required, ideally on the basis of a dedicated standard.

Questions Remain

System developers and applications are hungry for bandwidth. Even USB 3.0 has not been sufficient for some time now. 10 Giga-bit Ethernet still consumes too much power. Anyone who finds Camera Link and Coax-Press to be too inconvenient and proprietary, can look forward to USB 3.1 Gen2 and its entry into industrial image processing. The bandwidth, power transfer and plug connectors have been considerably improved. However, several questions remain: What will be the achievable cable length? How can such volumes of data be processed and saved? When will the first cameras arrive? With knowledge of the market and the use of proven product management methods, component and system manufacturers can make the right decisions in such situations and bring themselves in position to benefit from the new opportunities of this technological progress..

Schäfter+Kirchhoff develop and manufacture laser sources, line scan camera systems and fiber optic products for worldwide distribution and use.

High-speed cameras are no use if the large volumes of data cannot be rapidly transferred to the computer. For this, two rival interface standards exist: CoaXPress and Camera Link HS. While CoaXPress is slowly becoming established, very little is heard about Camera Link HS, although the standard has several advantages over CoaXPress. What is the reason for this?

inspect: CoaXPress (CXP) is increasingly becoming the standard high-performance interface for connecting high performance cameras to computers, but hardly anything is heard about Camera Link HS (CLHS) as an alternative. IS the CLHS interface standard now dormant?

M. Schwarzbauer: On the contrary, it is now becoming fully awake! As CXP came onto the market earlier, manufacturers of cameras and frame grabbers paid more attention to this interface. Because of this, especially in the field of frame grabbers, a gap opened up which will gradually close in the future. As well as this, CXP and HSLink, the predecessor of CLHS were relatively similar. However, there are a few major differences and even advantages in comparison with CXP.

inspect: What are the most important differences or advantages of Camera Link HS in comparison with CoaXPress?

M. Schwarzbauer: There are several differences. However, the main difference lies in the cable connection between the camera and the frame grabber: At the moment CXP is heavily oriented to coaxial cables, while CLHS concentrates on optical cables. Optical cables are especially attractive, because the signal transfer is better. They are not sensitive to electromagnetic interference, they do not produce any interference themselves and they are easy to handle, light and cheap. The situation is different with coaxial cables. As well as this, with CXP, users are currently restricted to a maximum transfer speed of 6.25 Gigabit per second (Gb/s) and a maximum cable length of 68 m, depending on the type of cable. In contrast, with optical cables and CLHS the transfer distance is theoretically infinite and at present the maximum transfer rate is 10,3125 Gb/s. On the other hand, an advantage of CXP is power-over-cable, which means that there is the facility to use the data cable for the camera power supply. This is not the case with CLHS.

Dr. Gerhard Holst,
Research Manager
at PCO

Martin Schwarzbauer,
Development Engineer
at PCO

Promising for the Future: High-performance Interface Standard Camera Link HS

Dr. Gerhard Holst, Research Manager and Martin Schwarzbauer, Development Engineer at PCO spoke to inspect about the development status of the Camera Link HS communication interface for high-speed cameras in comparison with CoaXPress.

G. Holst: I would like to add something here. Coaxial cables for CXP are special cables which have been explicitly designed for this interface and are accordingly expensive, while CHLS uses the cheap standard network hardware of 10 Gigabit Ethernet (10 GbE). This not only applies to cable. With CLHS the transmitter and receiver are based on off-the-shelf Ethernet technology. In contrast, CXP uses special cable drivers for the camera and special cable receivers for the frame grabber, which are matched to the signal.

M. Schwarzbauer: For us, the main differences between the two high-performance interfaces are in the bandwidth, the scalability and the way in which reliable transfer is ensured, i.e. via the Resend and Forward-Error correction mechanisms. In terms of transfer reliability, CLHS is considerably better and more convenient than CXP.

inspect: Who is backing CHLS and what is the

present status of the CLHS standard specification? What has already been implemented, what is planned and when will this become available?

M. Schwarzbauer: Of course, CLHS is backed by the Global Association for Vision Information AIA as the supporter of the standard. Teledyne Dalsa chairs the Camera Link HS sub-committee and provides HS-Link as the basis of CLHS. Other companies which are actively working on the CLHS standard include JAI, Matrox Imaging, Silicon Software and PCO. With regard to the CLHS specification, Version 1.0 of March 2015 is the current version. There are the M and the X protocols. The main differences between these are the channel coding and the speeds. As with CXP, the CLHS-M protocol also uses 8B/10B coding with Packet-Resend mechanism, while in contrast the X protocol uses the considerably more efficient 64B/66B coding with Forward Error Correction (FEC). The higher protocol level

Fortsetzung auf S. 14

// IMAGING SOLUTIONS FOR YOUR APPLICATION

We Turn Attention to Detail into Safety and Security.

Industrial Inspection
Medical & Science
TS & Traffic Monitoring
🌐 www.AlliedVision.com

 Allied Vision

(Message Layer) is identical with the M and the X protocols. However, I would like to focus on the X protocol, as this will be the future for high-performance interfaces. At present, there is intensive work on the CLHS specification Version 2.0, which should be complete in summer 2016, so that it will be officially available at the VISION exhibition in autumn 2016. There will be extensions in CLHS Version 2.0. For example, the actual image data will have a more universal structure than at present, so that in future 3D data will be able to be transmitted without problems. We consider this to be a great advantage. As well as this we have defined a function in order to measure the length of the cable or the time which a message requires for transmission via the cable. This is necessary for applications which involve very long distances to the camera, in order to determine the correct timeout values for the communication. In addition, the information can be used to compensate for signal propagation delays for Trigger-over-Cable, if e.g. several cables of different lengths are connected to a single frame grabber. This means that the frame grabber can cause a trigger event, which arrives at all of the cameras at precisely the same time in spite of different cable lengths. An additional extension are ROIs, i.e. detailed sections of the image within the image, which can be changed on-the-fly to obtain enlarged or shifted ROIs. These are the most important extensions with regard to the protocol. With regard to the hardware, further plug connectors are being discussed, e.g. QSFP plug connectors will be officially introduced so that a bandwidth of 4.8 Gbyte/s can be obtained via a single plug connector for the X protocol.

inspect: What is the advantage of the fact that with CLHS the IP core is integrated into a Field Programmable Gate Array (FPGA)?

M. Schwarzbauer: This is also possible with CXP. However, a special feature of CLHS is that a Committee-IP core is provided. This can be obtained cheaply from AIA. Non-members of Camera Link HS pay a small fee of USD 1,000, while this is free of charge for members. The Committee-IP core has a great advantage: If everyone uses this IP core, this ensures that everything is interoperable. Then there are no different development levels and the same features are implemented. The objective is to enable device manufacturers to quickly implement the CLHS interface and therefore achieve a very short time-to-market. At this point I would like to emphasise that with CLHS, if FPGAs with 10 Gb transceivers are used, no external components are necessary as is the case with CXP. The SFP+ module (electro-optical converter) can be connected directly to the FPGA. Implementation of the hardware is therefore exceedingly simple.

inspect: From what you say, a significant advantage of CLHS in comparison with CXP is the data security concept. Could you please explain this in more detail?

M. Schwarzbauer: One of the requirements of CLHS is the necessity not to lose data in case of individual bit errors. Because of this, mechanisms for the correction of bit errors were defined for Camera Link HS. There are two different solutions for the CLHS protocol: On the one hand, protocol information (Protocol Headers) is transferred several times (data redundancy) and on the other hand the application data (content of video and command data) are secured with a Cycle Redundancy Check (CRC) so that the data is re-sent in case of an error (Resend mechanism). In contrast, the CLHS X protocol uses 64B/66B coding with Forward Error Correction. Due to the technology, channel coding on the Physical Coding Sub-Layer (PCS), there is no additional overhead due to the FEC. Therefore, for a physical coding block, up to 11 Bits can be corrected for block errors without an additional latency time. With the use of FEC and the elimination of the necessity for the Resend mechanism, the CLHS X protocol greatly simplifies implementation into the FPGA. At present CXP does not use any error correction for video data. Otherwise the mechanisms are similar to those of the CLHS M protocol. It must be emphasised that the CLHS M protocol and CXP use the 8B/10B protocol for channel coding. This means that here, on the lowest level, 20 % of the bandwidth is "wasted" without any error correction measures. With 64B/66B channel coding, the CLHS X protocol is far more effective with only a 3 % loss of bandwidth.

inspect: For CLHS, special attention was placed on trigger capability. Why is that so and what are the advantages to users – for example with regard to line scan cameras?

M. Schwarzbauer: For Teledyne Dalsa line scan cameras it is very important to be able to trigger these with a very high frequency of about 200 kHz with jitter which is as low as possible. The CLHS protocol was oriented to this. In addition, there was the requirement for direct control of the sensor. For example, with CLHS, different colours can be exposed for different times using the different trigger signals. CLHS not only uses high frequencies with low jitter of approx. 3 ns for triggering, but also the trigger packages, which contain the trigger information are very universally structured, so that various trigger events can be implemented.

inspect: So a scalable and future-proof camera solution is very important? What about the selection of the CLHS interface?

G. Holst: Our intention was to specify an interface which is easily scalable. Today's requirements for transfer volumes are in-

creasing rapidly and we do not want to have to design a new interface from first principles for every jump in speed. This meant that scalability was a very important point. Up to now, CLHS looks very good. With the pco.edge camera we have a single channel application and with the pco.flow we have a camera with four independent cables which can be connected to computer systems in any way. Due to CLHS it does not matter whether the four cables are connected to a single frame grabber or whether four frame grabbers are used for the camera.

M. Schwarzbauer: Above all, with regard to the future I would like to emphasise that standard components are used for CLHS, which is a great advantage of CLHS in comparison with CXP. This means that we are going with the flow with Ethernet. If speed requirements increase, CLHS will also benefit, because we use precisely the same hardware. This minimises the investment risk. We use the lowest protocol level which is necessary for this technology. This has nothing to do with the Ethernet protocol as such, but only relates to the physical layer, which specifies where a data package starts and finishes. Therefore it is entirely conceivable that in future optical modules for 25 GigE are available for the consumer market, we will also be able to use these 1:1. With CLHS we do not need to rely on any special hardware. In contrast, with CXP investment in new chips is necessary for each jump in speed. This is completely eliminated with us.

inspect: What do you consider are the market opportunities for Camera Link HS in the future and on what do these mainly depend?

M. Schwarzbauer: All three interfaces, 10 GigE (Vision), CXP and CLHS will be on the market. Ultimately it is the camera or the application which decides which interface is best suited. If you are talking about genuine high-range, then CLHS will primarily have the advantage in the future. Above all this is because we can upgrade the speed more cheaply and easily than with CXP – and that is an enormous advantage.

We took the world's most precise color line scan technology...

...and made it better.

JAI's acclaimed color line scan technology is now available with large, 20-micron pixels for exceptionally low noise images. The new Sweep+ Series features an 80 kHz line rate for high-speed throughput. And an optimized lens perfectly matched to the prism technology to ensure the best possible image sharpness, uniformity, and level of detail. Available in a 3-CMOS RGB configuration, or a 4-CMOS RGB+NIR model.

Trade Fairs & Conferences 2016

13. - 18.02.2016
San Francisco, California, USA
SPIE Photonics West 2016

SPIE Photonics West is the No. 1 laser, photonics, and biomedical optics conference: 20,000 attendees, two exhibitions with more than 1,250 exhibiting companies, 70 special events, 4,800 papers in the areas of biomedical optics, optoelectronics, industrial lasers, nanophotonics, MOEMS-MEMs, and more.

<http://spie.org/x2584.xml>

23. - 25.02.2016
Nuremberg, Germany
Embedded World

Embedded World is the leading international Fair for embedded systems. Be it security for electronic systems, distributed intelligence, the Internet of Things or e-mobility and energy efficiency, the embedded world trade fair in Nuremberg enables visitors to experience the whole world of embedded systems.

www.embedded-world.de

24. - 26.02.2016
Bilbao, Spain
Metromet 2016

12th International Conference on Industrial Dimensional Metrology. Metromet is the most important conference in the sector of industrial dimensional metrology. Metromet provides information about the latest technological, the progress made in the sector and we constitute a forum for debate on metrology and its development in a fast changing industry.

www.metromet.org

02. - 03.03.2016
Wetzlar, Germany
W3+ Fair

The W3+ Fair is an interdisciplinary networking trade fair for the fields of optics, electronics and mechanics. It provides these high-tech sectors with

a new, multidisciplinary forum for information, innovation and contact.
www.w3-messe.de

08. - 10.03.2016
Guangzhou, China
SPS – Industrial Automation Fair Guangzhou

The trade fair is the leading platform for capitalising on Industry 4.0 solutions in China. It covers the entire system and comprehensive automation solutions all components. Trade fair and adjoining conference offer the perfect platform to search the right solutions for automation tasks.

www.spsinchina.com

15. - 17.03.2016
London, UK
Image Sensors Europe

Image Sensors is the key annual Image Sensors technical and business conference in Europe. Image Sensors attracts a wide range of companies from across the digital imaging supply chain.

www.image-sensors.com/about

17. - 20.03.2016
Istanbul, Turkey
WIN Eurasia Automation

The WIN Eurasia Automation gathers professionals of the industry. It is leading innovation platform of the Eurasia, bringing together latest technologies as part of the fairs in areas of Otomasyon (Industrial Automation), Electrotech (Energy, Electric and Electronic), Hydraulic & Pneumatic (Fluid Power Technologies) and Materials Handling (Transport, Storage, Handling and Logistics).

www.win-automation.com

13. - 15.04.2016
Moscow, Russia
Expo Control 2016

Expo Control, the unique and comprehensive trade show in Russia yearly

demonstrates to specialists all the sidedness and variety of latest technologies and decisions for industrial and scientific quality assurance, measurement and testing. The show meets the high requirements of trade and professional visitors and offers a varied up-to-date and compact overview of products and solutions presented: from materialographic and other scientific researches to measuring and testing methods and technologies for materials, designs, complex mechanisms; from electronic testing systems to components and systems for analysis apparatus and other quality assurance of products and systems and many more.
www.expo-control.com

25. - 29.04.2016
Hanover, Germany
Hannover Messe

Lead theme 2016: Integrated Industry – Discover Solutions

The age of Integrated Industry is standing at the door. Energy systems will be digitally controlled. Mature Industry 4.0 technologies are hitting the market. Hannover Messe 2016 will drive this development even further - with a record number of examples of concrete applications and Partner Country USA.
www.hannovermesse.de

26. - 29.04.2016
Stuttgart, Germany
Control

As the world's leading trade fair for quality assurance, Control brings together users from all over the world with the international market leaders and innovative suppliers of all QA related technologies, products, subsystems and complete solutions in hard and software.

With over 900 exhibitors from 32 countries around the world, Control is the number 1 source of information for all companies that see first class quality as the basis of their business success. At a very early stage, the specialist visitors gain insights into the production and test engineering spheres of the future. In this, Control relies on the transfer of knowledge

and technology between research & development and the users in industry.
www.control-messe.de

03. - 05.05.2016
Boston, USA
The Vision Show 2016

The Vision Show is North America's leading showcase of machine vision and imaging components and solutions. The accompanying conference features practical, real-world training that you can put into practice right away.

www.machinevisiononline.org

10. - 12.05.2016
Nuremberg, Germany
Sensor+Test

The international trade fair presents the entire spectrum of measuring and testing system expertise from sensors to computers.

www.sensor-test.com

07. - 09.06.2016
Frankfurt, Germany
Optatec

The Optatec international trade fair for optical technologies, components and systems provides the optics industry with the world's leading information, communication and business platform at the Frankfurt Exhibition Centre. With its biennial schedule, Optatec focuses on the industry's innovation potential like no other event of its kind.

www.optatec-messe.de

08. - 09.06.2016
Moscow, Russia
Vision-Russia 2016

The the only specialized machine vision event in Russia. A combination of both exposition and conference part attract integrators, engineering centres, end-users, OEM's and research institutions interested in machine vision, optical inspection and fault finding.

www.vision-russia.ru

09. - 11.06.2016
Edinburgh, UK
14th EMVA Business Conference 2016

Every year EMVA brings together business leaders and technical experts within the machine vision industry from Europe and around the world with a well-balanced mixture of high-level speeches and networking opportunities. The conference covers the different business segments Management, Technology, Innovation, Markets and Marketing and it offers outstanding networking opportunities. We go the step further by providing the necessary organisation and infrastructure for pre-scheduled bilateral meetings matching the individual attendee's needs.
www.emva.org

21. - 24.06.2016
Munich, Germany
Automatica

Automatica is the leading trade fair for industrial automation and mechatronics. It is a four-day show that will give you a comprehensive look at the latest developments in automation.

For several years now, the trade fair has been the platform where specialists and executives in all branches of industry gather information about the latest developments. There are five exhibition halls dedicated to the various main categories, covering everything from sensor technology and drive technology to supply technology and positioning systems. As a trade fair for automation, it also features a separate exhibition sector for the booming service robotics industry again this year.
www.automatica-munich.com

27. - 30.09.2016
Essen, Germany
Security Essen

Security Essen is the world's most important trade fair for security and fire prevention.

From fire prevention and cyber security and CCTV to the protection of outdoor areas: experts, decision-makers and buyers from this industry will be meeting in Essen.
www.security-essen.de

10. - 13.10.2016
Stuttgart, Germany
Motek

The international trade fair Motek is the world's leading event in the fields of production and assembly automation, feed technology and material flow,

streamlining through handling technology, and industrial handling. As such, Motek is the only trade fair to clearly focus on all aspects of mechanical engineering and automation and on the presentation of entire process chains.
www.motek-messe.de

17. - 19.10.2016
Beijing, China
Vision China 2016

Vision China 2016 will serve as an efficient platform for showcasing latest machine vision products and technology as well as conducting trade exchanges.
www.visionchinashow.net

08. - 10.11.2016
Stuttgart, Germany
Vision

Vision is the world's leading trade fair for machine vision. The who's who in the machine vision industry meets in Stuttgart and presents an incomparable range of products and services: from sensors to processors, from cables to cameras, from software to illumination systems. However, complete machine vision systems and very specific applications for many different industries are exhibited – from mechanical engineering and the automotive industry through to the medical technology industry and many, many more industries besides.
www.vision-messe.de

12. - 13.11.2016
Coventry, UK
Photonex 2016

Photonex is the UK's largest showcase event dedicated to photonics and light technologies. The event provides experts and professionals in the field the unique opportunity to meet with suppliers across the spectrum of photonics.
www.photonex.org

22. - 24.11.2016
Nuremberg, Germany
SPS/IPC/Drives

SPS IPC Drives is the exhibition for electric automation technology. It covers all components down to complete systems and integrated automation solutions. The trade fair is the platform for comprehensive information on products, innovations and current trends within the electric automation industry.

IMAGING ANYWHERE & EVERYWHERE

About Allied Vision

For more than 25 years, Allied Vision has been helping people see the bigger picture. With our technology and our expertise, we help our customers gain insight by seeing more and hence be more successful in what they do.

Individual Advice, Individual Solution

Allied Vision supplies camera technology and image capture solutions for industrial inspection, science, medicine, traffic monitoring and many more application areas in digital imaging. With a deep understanding of customers' needs, Allied Vision offers a camera for nearly any application. If no standard product fits, the Allied Vision Modular Concept creates additional flexibility providing hardware option combinations that are almost endless. Allied Vision cameras are easy to integrate into any machine vision system thanks to our Software Development Kit (SDK) that is compatible with all common operating systems, camera interfaces and image-processing libraries.

First-class Quality, First-class Service – Worldwide

Allied Vision's highly qualified engineers and technicians design and manufacture our digital cameras according to the highest quality standards in

the industry. Our quality management system is not only ISO 9001 certified, it also complies with the ISO 13485 standard for medical equipment.

With eight R&D, Manufacturing and Sales locations in Europe, North America and Asia and distribution partners in more than 30 countries around the world, we keep close to our markets order to develop meaningful products and service innovations. Thanks to this worldwide network, Allied Vision customers enjoy a service and technical support that is second to none in the industry.

About Basler

It's the little things we do

It isn't any one thing – but rather a series of small commitments we make every day – that makes Basler the most trusted brand in the industrial camera category.

Like rigorously testing every camera we manufacture before it leaves our facility – so it will perform as promised in yours. Like offering the vision industry's first three-year camera warranty.

Like continually auditing and improving every facet of our business to increase our efficiency and decrease costs for you.

Like limiting our product development activities to game-changing products that deliver new and immediate value to our customers.

It's the little things we do that add up to the vision industry's largest – and smartest – industrial camera portfolio. Today Basler's portfolio include some 300 models – and it's still growing – with cameras ideally suited to robotics, retail, inspection, intelligent traffic, industrial and medical microscopy, security and other wide-ranging applications.

With hindsight comes insight – and foresight

With more than a quarter century in business and more than half a million cameras currently in the field, Basler grew to be the largest industrial camera producer for industrial applications by continually reinvesting in research, development and superior manufacturing capabilities. Our in-house production facilities in Germany and Singapore are living laboratories where we learn through con-

tinuing experience to improve our cameras' performance by such critical standards like image quality, reliability, repeatability and ease of use. Basler's longevity, breadth of experience and market reach afford us a unique ability to anticipate market trends, evaluate emerging technology and develop products that drive results for our customers.

We don't just invent vision standards. We perfect them.

From the time we first championed the development of industry-wide Camera Link, GigE Vision and USB3 Vision interface standards, Basler has driven the technical innovations that drive business for our customers. We've delivered consistency, reliability and high performance – without the high price tag. With a starting price of just EU199 and a mere 29 mm x 29 mm footprint, the Basler ace is the perfect example. It offers the industry's best ratio of price to performance, along with the interface, sensor and resolution option best suited to your application.

About Baumer

The Baumer Group is one of the worldwide leading manufacturers of sensors, encoders, measuring instruments and components for automated image-processing. With around 2,300 employees and 38 subsidiaries in 19 countries, the family-owned group of companies is always close to the customer.

Capture the Essential: Industrial Cameras and Vision Sensors

Merging cutting-edge technologies and customer-focused consultancy has made us one of the leading manufacturers for image processing components. We offer a unique range of products, from industrial cameras and vision sensors to image processing components, for many different applications across varied industries. The location in Germany accommodates R&D and production under one roof which ensures our high product quality standards. Prior to delivery, every component undergoes rigid electrical and optical testing and inspection.

High-performance Industrial Cameras

High frame rates, exceptional image quality and ease of integration – that's what our industrial cameras stand for. Their robust, industrial design is the basis for long-term stability and precise image analysis. The portfolio includes CCD- and CMOS-based matrix cameras, standard-compliant with GigE Vision, Camera Link and USB3 Vision. Our many

years of expertise make us understand your requirements to provide the optimum product for your application. Where standard products are too limited, we work together with you to develop customized components that fit perfectly to your application.

Easy and Intuitive Vision Sensors

Intuitive operation, fast and easy integration and configuration within minutes: These attributes characterize the Baumer VeriSens vision sensors. They can perform up to 20 different feature checks on object position and location, presence and completeness, reading and verifying human-readable imprints (OCR/OCV) or bar and matrix codes including GS1 codes. High process reliability is achieved with our patented FEX image processor. Models for color identification and inspection, with C-Mount design and integrated flash controller are also available as well as models with integrated white and infrared illumination.

About IDS Imaging Development Systems

The Global Market Leader in USB Industrial Cameras

IDS Imaging Development Systems GmbH is a leading manufacturer of digital industrial cameras with USB 2.0, USB 3.0 or GigE interfaces. Boasting more than a decade of experience in the development and sale of USB 2.0 cameras, IDS belongs to the pioneers in the development of digital USB 3.0 industrial cameras today. The visionary thinking and modular concepts enable customers to develop innovative and individual applications.

Around half of the 200 employees are engineers in hardware and software development as well as engineering and applications. Assisted by the skilled sales team, they provide customers with service and support, both before and after sales.

Founded in 1997, IDS nowadays has subsidiaries in Japan and USA as well as further offices in Europe and Asia. We focus on the company's sustainable expansion, supported by our distribution partners in almost every country in Europe and Asia.

Extremely simple handling, high quality, long-term availability, and all-round service underpin the success of IDS products. IDS has created a corporate culture based on the fundamental values of sustainability, responsibility, and trust. High environmental and ethical standards along the value chain play a key role. A keen awareness of social responsibility is just as important to IDS as sustainable development and production.

IDS Product Portfolio

Industrial cameras with

- USB 2.0, USB 3.0 and GigE interfaces
- CCD & state-of-the-art CMOS sensors from Sony, Aptina, e2v, CMOSIS and ON Semiconductor
- Resolutions from VGA up to 18 Megapixel

Ensenso stereo 3D camera
IDS Software Suite
Framegrabber

Custom Solutions

Our customized cameras provide you with the high quality, excellent functionality and ease of use that you expect from IDS. We modify our tried and tested standard products so that they meet your requirements: From slight changes to the design, to OEM solutions, through to special hardware and software alterations to give you the optimum solution for your application and your specific demands.

Support & Services

Take advantage of our experience and our extensive internal development and design resources, and benefit from the expert knowledge of our experienced application and engineering teams. As well as feasibility studies our services include practical assistance with system integration and providing general or application-specific training.

Markets

Machine vision, 3D vision, automation systems, medical technology, life sciences (e.g. ophthalmology, pharmacy, microscopy, science and research, robotics, semiconductor manufacturing, transport and logistics, packaging, printing, surveillance and security, ITS (Intelligent Traffic Systems).

About OPT Machine Vision

OPT Machine Vision Co., Ltd is a global supplier of machine vision components with a focus on LED illuminations, lenses and accessories. Manufacturers and system integrators in more than 20 countries worldwide solve their Machine Vision tasks with the results of the passionate work of our 350 employees.

Since 2005 our company is driven by the mission to develop LED lights and optics, which are easy to integrate and allow for new technical solutions to modern challenges of automated manufacturing. Additionally, our goal is to make these solutions so cost-effective, that their application uplifts the quality, productivity and at the same time the overall efficiency of production lines.

With more than 130 highly educated engineers, many of them experienced in industrial imaging for decades, we optimize our products by the selection of the components from high quality suppliers, by the mechanical, optical and electronic design for high performance and longevity as well as by production processes utilizing high-end assembly and test equipment plus western quality management standards. Still, thanks to our production site in the Dongguan province of China, we are able to offer our products and services at very attractive list prices for the domestic and international market.

This allows us to provide 38 different product lines of LED lights and lenses with over 100,000 product variants, which fulfill the great majority of application requirements in the areas automation, traf-

fic, aviation, medical and food. With our dedicated engineering team for customizations, we are happy to answer specific needs with tailored hardware, firmware and software solutions in short time frames and at attractive costs.

Our experienced team of 35 sales engineers in China, Taiwan, California and Germany provide personal consulting services before and after your decision for OPT Machine Vision products.

Thanks to short lead times, the very broad portfolio of high quality Machine Vision components, our consistent customer orientation and optimal cost-effectiveness, we are proud to build on the trust of more than 10,000 customers worldwide, among them several Global Fortune 500 enterprises. For example, it is very likely that the high-end smartphone in your hand has been inspected with solutions by OPT Machine Vision.

Please follow us here and stay up to date on new products, technological advances and general news from the area of our core expertise: Machine Vision.

About Point Grey

Point Grey is a global leader in the design and manufacturing of innovative, high-performance digital cameras for industrial, scientific, medical, traffic, and security applications. We offer a unique and comprehensive portfolio of USB3 Vision, GigE Vision, FireWire, and USB 2.0 products known for their outstanding quality, ease of use, and unbeatable price-performance.

Innovation

At Point Grey, “innovation” is more than a tagline; it’s a way of life. The synergies of a broad range of hardware, software and mechanical engineering skills under one roof allows Point Grey to successfully bring many innovative and ground-breaking products to market. This drive for innovation has led to many industry firsts, including the world’s first and smallest 1394b digital camera, the world’s smallest GigE camera, and the world’s first USB 3.0 camera.

Product Excellence

All design, prototyping, manufacturing, testing, and packaging is done out of a state-of-the-art facility in Vancouver, Canada. These facilities include dedicated SMT lines, AOI and X-ray machines, industrial clean room, and automated test stations. The “Seal of Quality” label on each camera can-

not be printed until the camera has been 100% inspected and tested. This rigorous quality testing, together with hassle-free product warranties, ensures that customers can rely on Point Grey cameras for their demanding vision applications.

Customer Care

To ensure our customers achieve maximum value from their camera systems, Point Grey offers world-class support on installation, configuration, customization and trouble shooting. Our Customer Support program includes quick response email and phone support, online user manuals, online knowledge base articles and regular firmware updates.

End-to-End Imaging

A critical component of any vision system is the speed and reliability of the imaging pipeline, from light hitting the image sensor to data reaching the host system. Point Grey Research has taken ownership of the entire pipeline, and over the last 15 years has created a diverse portfolio of digital cameras, peripheral components, and software.

About Chromasens

Machine Vision 'Made in Germany'

Chromasens develops and produces both standardized machine vision components – as color line scan cameras, spectral cameras, 3D stereo cameras and line scan lights – and

custom-specific image processing solutions. Chromasens employees have comprehensive expertise in development, project management, application creation, system integration and professional services. The company's know-how is further enhanced through continuous dialogue with universities and research centres. The intensive cooperation with the customer in the form of comprehensive support throughout every project phase is a cornerstone of the company philosophy. Development and manufacturing takes place at the company's facility in Constance.

About Framos

We Enable Imaging Teaching Machines to see!

Since 1981 Framos is a leading technology provider in industrial, scientific and medical image processing. We enable manufacturers, system integrators and researchers to benefit from imaging technologies.

Our team offers a fully comprehensive portfolio of imaging components, technical consulting and support. Thanks to many years of experience in the industry we offer engineering services for custom camera development as well as complete turn-key-solutions.

- **Imaging Components** – Key components to build a camera or an entire imaging system
- **Engineering** – Hard- and software development and camera adaptations tailored to your needs
- **Imaging Systems** – Customised imaging systems based on 3D technology
- **Global Services** – Technical consulting, global sourcing and extensive logistics

About Fujifilm Europe

Fujinon Lenses from Fujifilm

The extensive product range of Fujinon branded CCTV and Machine Vision lenses from Fujifilm features the appropriate solution for almost every application. The Japanese manufacturer offers a continuously growing product range of high resolution megapixel Zoom and Varifocal lenses for security applications in HD quality.

Lenses for Machine Vision are precise optics with minimized distortion for optimal image quality – even in harsh environments. Special lenses round off the wide product range, like infrared-coated lenses for Day&Night, lenses for 3CCD cameras or blindspot-free 360° panomorph lenses. You no longer miss anything with Fujinon lenses.

About the JAI Group

JAI is a global manufacturer of digital cameras for machine vision, traffic imaging, surveillance, life science and scientific research.

Besides a broad range of leading-edge 1-CCD and 1-CMOS interlaced/progressive area scan cameras, JAI is a leading provider of multi-imager cameras incorporating advanced prism-block technology, including 3-CCD RGB area scan cameras, 2-CCD multi-spectral/HDR cameras plus a complete family of 3-CMOS/4-CCD/4-CMOS line scan cameras. JAI's product program includes cameras for visible, UV, NIR and

SWIR imaging with GigE Vision, Camera Link, USB 3.0 Vision and CoaXPress interfaces.

About Lumenera Corporation

Lumenera Corporation, headquartered in Ottawa, Canada, is a leading developer and manufacturer of high performance digital cameras and custom/OEM solutions. Lumenera's solutions provide unique combinations of speed, resolution and sensitivity to satisfy the most demanding digital imaging requirements. The company's core competencies include digital bus technologies such as USB 3.0, USB 2.0, HDMI, Ethernet and GigE as well as the integration of CMOS and CCD sensors. Lumenera leverages its leading edge technology to provide customized design ser-

vices, continuous innovation and licensing options to OEM partners. Lumenera customers achieve the benefit of superior price-to-performance ratios and faster time to market with the company's commitment to high quality, cost effective product solutions.

About Matrix Vision

Matrix Vision is a leading manufacturer and offers a large spectrum of digital cameras – from USB, GigE with Power over Ethernet to smart cameras with integrated easy configurable machine vision software. A wide range of USB 3.0 cameras with CMOS sensors up to 10 megapixels are provided with the USB3 Vision Standard. Matrix Vision introduced a new, revolutionary 6D perception camera. It detects objects in space by means of motion, depth information and experience. The perception camera is ideal for palletizing, de-palletizing and pick & place applications in logistic, packaging and auto-

motive sectors. Besides an extensive range of standard products we offer custom solutions, which provide maximum utility for users as a result of continuous development. Join our vision world and benefit from cutting-edge technologies and extensive services.

About Micro-Epsilon

Micro-Epsilon is a medium-sized family-run company which plays a leading role in measurement technology. For more than 45 years we have continuously offered reliable, high performance, unique solutions particularly when high precision measurement or inspection is required. Our product range covers sensors for the measurement of distance and displacement, sensors for IR temperature measurement and color detection, as well as systems for dimensional measurement and defect detection.

Innovative products that provide the highest level of precision are created through intensive research and development processes, unique know-how and a broad network of collaborative operations.

About Optics Balzers

Optics Balzers is the innovative and independent industry partner for the development and production of coated optical components and subassemblies. The company possesses a broad and in-depth know-how in optical thin-film coating processes, complemented by sophisticated patterning, glass bonding and sealing, and further processing capabilities necessary for producing optical thin-film coated components up to optical subassemblies.

Highly experienced and skilled development and engi-

neering teams closely collaborate with customers to develop innovative solutions meeting their requirements and design robust processes to manufacture the customer specific components. The combination of these capabilities and skills places Optics Balzers at the forefront of markets in the photonics industry such as Automotive, Biophotonics, Laser, Space & Defence, Lighting & Projection, Sensors & Imaging, and Industrial Applications.

About Opto

Opto develops and manufactures customized, optoelectronic modules, optical components and systems for the industrial and biomedical markets. With its own facilities in Germany, France, the UK and Asia, Opto is a globally recognised solution provider, able to support customers from around the globe.

For more than three decades, Opto GmbH has established itself as a leading International supplier of machine vision solutions based on industrialized microscopy and machine

vision. Through its deep application knowledge, Opto provides its clients with special optomechanical solutions that are reduced to the essentials of the application and perfectly cost optimised.

About Ricoh Imaging in Europe

Ricoh Imaging Deutschland-GmbH, formerly known as Pentax Imaging, is proud of the respect its products have gained over 50 years of high quality manufacturing. All lenses are developed with the focus on quality and performance and designed for a long service-free life.

This is achieved by the combination of modern technology and precision manufacturing. In 2012 Ricoh introduced MV cameras. The new range of cameras are extremely compact, robust and suitable for almost all industrial image processing applications.

Since 2013 Ricoh has been working on high technology "Special Camera Systems." The new Extended Depth of Field System is only one example. In 2014 Ricoh will show many more new and interesting innovations including lenses, intelligent cameras and equipment.

About Jos. Schneider Optische Werke

Jos. Schneider Optische Werke GmbH is a worldwide recognised manufacturer of high-performance lenses and filters as well as optical and mechanical components for industrial applications.

With excellent optical and mechanical properties, Schneider-Kreuznach products suit perfectly to industrial demands. The standard product range includes:

- C-Mount lenses (Compact)
- Unifoc lenses (V-Mount, Macro)
- Lenses for large sensors up to Ø86mm
- Line-scan lenses
- Industrial filters (Band-, Long- and Shortpasses, Polarizers)

Schneider-Kreuznach also provides customised solutions for OEM projects. The understanding for the customer's demand and the in-depth expert knowledge lead to excellent opto-mechanical systems.

About Stemmer Imaging

Stemmer Imaging is Europe's largest imaging technology and service provider with head office in Germany (Puchheim near Munich) and subsidiaries in many European countries. Our customers have access to a wide variety of imaging products and solutions from the world's leading manufacturers who provide cutting edge vision technology across all product segments, including Stemmer Imaging's independent,

modular programming library for imaging applications, Common Vision Blox (www.commonvisionblox.com).

This broad range of components and solutions, our experience of 40 years in imaging and a comprehensive support by a staff of more than 200 employees allows us to offer you everything you need to solve your imaging task.

About Teledyne Dalsa

Teledyne Dalsa is a global leader in the design, development, and manufacture of digital imaging products and solutions. In addition, Teledyne Dalsa specializes in the engineering and fabrication of semiconductor components and services. The company employs approximately 1,000 people world-wide with sales offices across North America, Europe and Asia which support an international distribution network serving more than 40 countries.

Today, Teledyne Dalsa image sensors, cameras, frame

grabbers and software are used in thousands of automated inspection systems around the world and across multiple industries.

About Vieworks

Founded in 1999, Vieworks has been actively serving digital imaging markets with its distinguished vision technologies.

Vieworks' innovative Machine Vision cameras are adopted and used in a variety of industrial applications including but not limited to industrial automation and inspection, aerial imaging, surveillance, science and research. Manufacturers of machines, equipments and solutions, who are market-leading customers in different industries, incorporate our products into their systems, and acknowledge the performance of our products.

Our industrial camera solutions are designed and built to

provide customers with higher resolution, wider dynamic range and faster frame speed. This is realized by accumulated know-hows and technologies such as precision opto-mechanics technology and imaging signal processing technology as well as electronics design technology and software development technology.

As a fast growing technology company with long-term growth prospects globally, we endeavor endlessly to realize image beyond imagination by advancing vision technologies, innovating work process as well as focusing on the needs of our customers. Vieworks is an ISO-9001 certified company.

About Vision Components

Vision Components GmbH is a leading supplier in the field of machine vision and develops and distributes intelligent, network-compatible real-time Smart Cameras which are able to operate without a PC. These embedded vision solutions can be easily integrated into almost any application. Customers can choose between models with ARM processors with freely pro-

grammable FPGA and VC Linux OS or DSP-based models with the proprietary VCRT OS. The product portfolio includes Smart Cameras with/without protective housing, single board cameras, vision sensors. Providing custom-tailored OEM solutions for all kinds of applications are the core of the more than 20 years experience in machine vision and imaging.

About Ximea

Ximea designs and produces leading-edge, high-performance cameras with the lowest power consumption and the smallest footprint as well as highly optimized camera and imaging solutions for volume OEM applications.

The camera designs are based on powerful, flexible technology platforms that include an application programming interface (API) for more than 30 of the most common Vision libraries as well as compliance with industry standards like USB3 Vision. xiAPI supports Windows, Linux and OS X operating systems.

Customers can further adapt Ximea cameras by selecting specialized optics and data interfaces, while OEM customers can leverage Ximea's Custom Engineering services. This is how Ximea differentiates from the competition.

To ensure that Ximea offers the highest quality cameras at the best price, Ximea owns and operates its own engineering and production facilities in Bratislava, Slovakia. This allows us to design your solution with only the best components and to guarantee the optimal compromise between performance and cost with short lead times.

Allied Vision's camera portfolio is one of the largest in the market and offers a camera for nearly any application. If no standard product fits, the Allied Vision Modular Concept creates additional flexibility providing hardware option combinations that are almost endless. For even more specific requirements, our engineers can design camera modifications or even develop a custom camera to your needs. Allied Vision cameras are easy to integrate into any machine vision system thanks to our Software Development Kit (SDK) that is compatible with all common operating systems, camera interfaces and image-processing libraries.

Cognex designs, develops, manufactures, and markets machine vision sensors and systems. Cognex vision sensors are used in factories around the world to automate the manufacture of a wide range of items and to assure their quality. Cognex is the world's leader in the machine vision industry, having shipped more than 450,000 machine vision systems, since the company's founding in 1981. In addition to its corporate headquarters in Natick, Massachusetts, Cognex also has regional offices and distributors located throughout North America, Japan, Europe, Asia, and Latin America.

Compar industrial machine vision systems are the solution wherever quality control is required, zero-defects strategies are applied, or value for money and high productivity are needed. The main functions are inspection, identification, and robot guidance. Customers in all industries - however, especially in the automotive, watch-making, packaging, printing, electronics, medical and pharmaceutical sector - appreciate our innovative package solutions based on a modular system. Aspiring to be your competent system provider for machine vision and robotics, we offer solutions that include smart cameras, computer-based vision systems, accurate robots, and even integrated test installations that allow for highly flexible handling. It is our interdisciplinary and interconnected engineering knowledge about automation, image processing and robotics that enables us to create efficient systems that convince and delight our clients.

Luminax LED lights are especially designed and developed for use in industrial machine vision applications. Over 60 basic light types with approximately 4,000 different variations are available as continuous/static or flash light with various sizes and colours. The flash lights provide the ability to display processes without motion distortion and without influence of extraneous light. Should the right component for your application not be within this product portfolio, lights can be developed according to your requirements. Furthermore, iIM AG offers product loans for testing, which are free of charge. Additional components such as mounting solutions for different cameras, diffusors, fresnel lenses and polarization filters are also available.

Point Grey is a global leader in the design and manufacturing of innovative, high-performance cameras for industrial, scientific, medical, traffic, and security applications. We offer a unique and comprehensive portfolio of USB3 Vision, GigE Vision, FireWire, USB 2.0 and Camera Link products known for their outstanding quality, ease of use, and unbeatable price-performance. Founded in January of 1997, the company's approach to product pricing, quality control, and customer service has attracted thousands of customers worldwide, and its organic growth through product sales has enabled the company to expand significantly without any outside investment. Point Grey currently employs more than 250 people worldwide and has offices in Canada, Germany, Japan, China, and Italy. The company partners with a network of distributors in Japan, Korea, China, Singapore, Taiwan, and the United Kingdom.

Distinct coding of products or parts of products is a key requirement of modern production processes. With our stationary and handheld code reading systems we offer just the right products for reading and verification of 1-D and 2-D codes, such as bar codes and data matrix codes, as well as optical character recognition (OCR). This allows tracking and tracing of production batches along the entire production process and beyond. Application-specific machine vision tasks – such as the automatic parts recognition by means of shapes, dimensions, samples, outlines, or colors – can be optimally solved with our vision sensors.

SHL

PAINKILLER

The mvBlueGEMINI makes life simple for amateur image processors who do not possess programming knowledge, users and system integrators who want to configure an inspection quickly and easily.

"Out of the box" and "Plug & Work", these are key words that describe the mvBlueGEMINI perfectly. Hardware and software combine to create a perfectly balanced unit. With its browser-configurable software, inspections can be established visually and in an intuitive manner thanks to user-friendly menu navigation and the wizard function. The system is based on "tool box" technology. This open system allows professionals to expand the "tool box" as required.

Its most up-to-date features can be seen at: www.mv-painkiller.de

We have the largest spectrum of optical measurement technology and supply test systems for R&D and Production for every manufacturing step in optics: From a system for refractive index measurement, via various lens test systems with an autocollimator as measurement head, up to MTF test systems and camera module testers, we can supply the appropriate optical measurement system for every process step. As an automated production system only aligns as well as it measures, TRIOPTICS has successfully applied its competence in optical measurement technology to develop and market different systems for the active alignment and assembly of lenses and camera modules. We are now an established system provider for optical measurement and production systems and can offer our customers the appropriate system for their current and future applications.

As a technology leader, our company develops, produces and sells an optimally attuned modular system worldwide. It ranges from complex image processing systems to individual high performance LED lighting and precision optics. To master challenging image processing tasks that would overtax standard components, we offer our customers tailor-made image capturing and processing solutions. Leading OEMs and system integrators have banked on state-of-

the-art design by Vision & Control for almost 20 years.

Vision Engineering is a global leading-edge manufacturer of unique ergonomic stereo microscopes and non-contact measuring systems. Since its formation in 1958, Vision Engineering has become one of the most innovative and dynamic microscope manufacturers, with a global distribution network. The product range includes solutions for almost every inspection and measurement application. Innovative and superior ergonomic designs lead to performance and productivity gains. Quality is the goal! For us and our customers as well. The eyepieceless technology which is implemented in our systems allows a nearly fatigue-free operation with the microscope. More comfort is not possible ...

Sony Europe's Image Sensing Solutions division has an in-depth range of industry leading analogue and digital component cameras and image sensing products. Sony ISS continues to expand its popular IEEE1394b camera series with his first CMOS Global Shutter industrial Camera:

the revolutionary XCD-MV6 punches way above its weight, which is just 37 g. Less than two-thirds the size of the cubic, the new Micro Camera is a marvel of miniaturization and perfect for machine downsizing. A lightweight camera that performs like a heavyweight at unbeatable cost.

Spectrum Illumination is the leading supplier of high output LED lighting for the Machine Vision Market. Spectrum Illumination was the first company to bring high output LEDs to the market and we are still the only company with a full product line utilizing that technology. Spectrum Illumination has over 100,000 standard products with all different variations. Most standard products are available to ship within days of receiving a purchase order.

By combining innovative technology and customer-oriented service, Baumer ranks among the leading manufacturers of digital cameras and vision sensors. Modern image processing applications face the challenge of successfully completing complex inspection tasks at top speed. Baumer products are specially developed for demanding applications with high performance and quality requirements. With long-time stable reliability, versatility and easy integration, they convince customers all over the world.

New Extended Depth Field Camera

Ricoh's new Extended Depth of Field cameras have literally three times the depth of field that conventional cameras can offer at the same focal length, F-Stop and working distance without sacrificing resolution or brightness. Whilst conventional cameras require the closing of the iris in order to achieve increased depth of field and therefore darken the image, the Extended Depth of Field Camera with specialised lens and camera technology (built-in image processor) enables the brightness of the picture to be maintained. Applications like production line inspection, that used to require multiple cameras or focus re-adjustment can now be captured with a single camera. The new series of extended depth of field cameras comprises of four different GigE Vision and Camera Link models: VGA-Monochrome, 2 MP-Mono-chrome, 2-MP-Color and newly 5 MP-Color. An Extended Depth of Field system consists of the cam-

era itself, a special lens and camera firmware, which is adjusted at the factory to the lens used. In total there are lenses from 8.5 mm to 75 mm focal length available with different F-Stops.

Fastest USB3 Vision and PCIe-based-Cameras

USB3 Vision camera series xiQ: With this line of extraordinary small, lightweight, fast, efficient and highly integrated cameras, Ximea offers a unique value and performance proposition for the industrial market.

Hyperspectral imaging camera series xiSpec: Unique compact and lightweight USB3.0 hyperspectral cameras with 16 up to 150+ spectral bands in the visible light and near infrared. Perfect for mobile applications.

USB2.0 camera series xiMU: Ximea's smallest cameras with a size of only 15x15x8.5 mm offers big performance in tight spaces.

Scientific and High performance cameras: for the most demanding applications that require the ultimate image quality acquisition. With resolutions up to 16 Mpix, cooled and uncooled models, and signal fidelity of 14+bits, xiD, xiCe and xiRay cameras deliver best-in-class images.

PCIe based high speed cameras: these cameras provide the fastest possible image acquisition at high resolution with up to 20 MPix.

Enabling Innovative Optical Solutions

Optics Balzers has been the preferred partner for innovative optical solutions for more than 70 years. As a global leader, Optics Balzers focuses on high-tech markets such as Sensors & Imaging, Biophotonics, Laser, Space & Defence, Lighting & Projection, Automotive, and Industrial Applications. The company possesses comprehensive know-how in optical thin-film coatings and components, glass processing, patterning and sealing technologies.

20,000 copies

Advertising price list
from October 1st 2015

Individual Copies
Seven issues € 49,00;
single copy € 15.70 plus postage.

Pupils and students receive a discount
of 50% at sight of a valid certificate.
Subscription orders can be revoked within
1 week in writing. Dispatch complaints
are possible only within four weeks after
publishing date. Subscription cancellations
are accepted six weeks before end of year.
Specially identified contributions are the
responsibility of the author. Manuscripts
should be addressed to the editorial office.
We assume no liability for unsolicited,
submitted manuscripts. Reproduction,
including excerpts, is permitted only with
the permission of the editorial office and
with citation of the source.

The publishing house is granted the
exclusive right, with regard to space, time
and content to use the works/editorial
contributions in unchanged or edited form
for any and all purposes any number of

times itself, or to transfer the rights for
the use of other organizations in which it
holds partnership interests, as well as to
third parties. This right of use relates to
print as well as electronic media, including
the Internet, as well as databases/
data carriers of any kind.

Material in advertisements and promotional
features may be considered to
represent the views of the advertisers
and promoters.

All names, designations or signs in this
issue, whether referred to and/or shown,
could be trade names of the respective
owner.

PRO-4-PRO.com – PRODUCTS FOR PROFESSIONALS –
is a vertical product search engine operating across various fields for the B2B sector.

It is used as a platform for the comprehensive introduction of companies, of their products and of their services.

- basic entry free of charge
- detailed company and product description
- individual optimisation for search engines (e.g. google)
- sector specific newsletter service
- target-group-specific banner placement in relevant segments

World Biggest LED Machine Vision Lighting Manufacture

Multi-choice for thousands standard machine vision light

Strongest customize design ability, demo samples can be shipped within 15 days.

Make innovation in different industries application
